

Phlebotomy Steps: A Simple Guide to Drawing Blood

01 Identify the Patient

Always confirm the patient's identity by checking their full name and date of birth against the requisition form or wristband. This ensures accuracy and prevents errors.

02 Assemble Supplies

Gather all necessary materials, including gloves, alcohol swabs, a tourniquet, needles, blood collection tubes, gauze, and adhesive tape. Being prepared helps maintain a smooth and efficient blood draw.

03 Tourniquet & Locate Vein

Apply the tourniquet to enhance vein visibility and palpation. Select a suitable vein to ensure a smooth and successful draw.

04 Complete Draw

Insert the needle at the correct angle, smoothly collect the blood into the designated tubes, and follow the correct order of draw to prevent contamination or inaccurate test results.

05 Remove TTN (Tourniquet, Tube, Needle)

Release the tourniquet before withdrawing the needle to prevent hematoma. Remove the collection tube from the holder, then carefully take out the needle while ensuring patient comfort.

06 Apply Gauze & Tape

Immediately place sterile gauze over the puncture site and apply gentle pressure to stop bleeding. Secure with medical tape or a bandage to protect the site from infection.

07 Label Tube & Confirm Name with Patient

Properly label the blood sample with the patient's information while they are still present. Double-check their name and details to avoid misidentification or lab errors.
