The Evolution of the Unconscious Susan Long,2025-02-12 Drawing on over four decades of professional and academic experience Susan Long explores how the concept of the unconscious has evolved from the nineteenth to the twenty first century showing that it is more than an individual phenomenon but also a group organisational and institutional phenomena Each chapter examines theories that use the idea

of the unconscious first covering the work of Schelling Freud Bion and Lacan After examining traditional psychoanalytic ethos the author takes a look at the mid twentieth century extension of the meaning of the unconscious towards the social field Here she explores three main traditional categories of approaches the Neo Freudians the Frankfurt School and social scientists historians and anthropologists The book also covers the idea of approaching the unconscious from the perspective of the neurosciences as well as its connections with nature showing a broader more cosmic view of the unconscious in nature and the universe Lastly Long looks at how we might understand today s organisations and society through the lens of the changing ideas presented throughout the book Broad sweeping and accessible this book is a valuable resource for organisational psychologists consultants and managers exploring psychoanalytic and socioanalytic approaches as well as those in academic settings wanting to pursue an interest in the unconscious

Criticality as a signature of healthy neural systems: multi-scale experimental and computational studies Paolo Massobrio, Lucilla de Arcangelis, Valentina Pasquale, Henrik Jeldtoft Jensen, Dietmar Plenz, 2015-05-08 Since 2003 when spontaneous activity in cortical slices was first found to follow scale free statistical distributions in size and duration increasing experimental evidences and theoretical models have been reported in the literature supporting the emergence of evidence of scale invariance in the cortex Although strongly debated such results refer to many different in vitro and in vivo preparations awake monkeys anesthetized rats and cats in vitro slices and dissociated cultures suggesting that power law distributions and scale free correlations are a very general and robust feature of cortical activity that has been conserved across species as specific substrate for information storage transmission and processing Equally important is that the features reminiscent of scale invariance and criticality are observed at scale spanning from the level of interacting arrays of neurons all the way up to correlations across the entire brain Thus if we accept that the brain operates near a critical point little is known about the causes and or consequences of a loss of criticality and its relation with brain diseases e g epilepsy The study of how pathogenetical mechanisms are related to the critical non critical behavior of neuronal networks would likely provide new insights into the cellular and synaptic determinants of the emergence of critical like dynamics and structures in neural systems At the same time the relation between the impaired behavior and the disruption of criticality would help clarify its role in normal brain function The main objective of this Research Topic is to investigate the emergence disruption of the emergent critical like states in healthy impaired neural systems
