The water heater is a tank that heats water for use in the home. It is typically located in a utility room or basement. The tank is filled with water and heated by a burner at the bottom. The heated water is then distributed to the rest of the house through a network of pipes. The water heater is an essential part of a home's plumbing system and should be maintained regularly to ensure it is working properly.

There are several types of water heaters, including tankless, tank, and hybrid. Tankless water heaters do not have a tank and instead heat water on demand. Tank water heaters have a tank that stores water and heats it. Hybrid water heaters combine a tank with a heat pump to heat the water. Each type has its own advantages and disadvantages, so it is important to choose the right one for your home.
