Good Charts The HBR Guide to Making Smarter More Persuasive Data Visualizations shows how a good visualization can communicate the nature and potential impact of information and ideas more powerfully than any other form of communication For a long time dataviz was left to specialists data scientists and professional designers No longer A new generation of tools and massive amounts of available data make it easy for anyone to create visualizations that communicate ideas far more effectively than generic spreadsheet charts ever could What's more building good charts is quickly becoming a need to have skill for managers If you're not doing it other managers are and they're getting noticed for it and getting credit for contributing to your company's success

In *Good Charts* dataviz maven Scott Berinato provides an essential guide to how visualization works and how to use this new language to impress and persuade Dataviz today is where spreadsheets and word processors were in the early 1980s on the cusp of changing how we work Berinato lays out a system for thinking visually and building better charts through a process of talking sketching and prototyping This book is much more than a set of static rules for making visualizations It taps into both well established and cutting edge research in visual perception and neuroscience as well as the emerging field of visualization science to explore why good charts and bad ones create feelings behind our eyes Along the way Berinato also includes many engaging vignettes of dataviz pros illustrating the ideas in practice
