**Story in Children's Lives: Contributions of the Narrative Mode to Early Childhood Development, Literacy, and Learning** Kelli Jo Kerry-Moran, Juli-Anna Aerila, 2019-09-27 This book is based on the power of stories to support children in all areas of their lives. It examines the role narratives can play in encouraging growth in contexts and domains such as personal and family identity, creative movement, memory and self-concept, social relationships, or developing a sense of humor. Each chapter describes innovative and research-based applications of narratives such as movement stories, visual narratives to develop historical thinking, multimodal storytelling, bibliotherapy, mathematics stories, family stories, and social narratives. The chapters elaborate on the strength of narratives in supporting the whole child in diverse contexts, from young children on the autism spectrum improving their social skills at school to four and five-year-olds developing historical thinking to children who are refugees or asylum seekers dealing with uncertainty and loss. Written by accomplished teachers, researchers, specialists, teaching artists, and teacher educators from several countries and backgrounds, the book fills a gap in the literature on narratives. This work delves into the topic of narratives in young children's lives with a breadth of topics and depth of study not found elsewhere. Collectively, the insights of the contributors build a convincing case for emphasizing story across the various disciplines and developmental domains of the early childhood years. The writing style is scholarly yet accessible. Authors used a wide array of visual material to make their points clearer and show the reader what meaningful uses of story look like. Mary Renck Jalongo, Journal and Book Series Editor, Springer, Indiana, PA, USA. **Doing**

Cognitive Science and the New Testament István Czachesz, 2017 Over the last few decades, our knowledge of how the human mind and brain works has increased dramatically. The field of cognitive science enables us to understand religious traditions, rituals, and visionary experiences in novel ways. This has implications for the study of the New Testament and early Christianity. How people in the ancient Mediterranean world remembered sayings and stories, what they experienced when participating in rituals, how they thought about magic and miracle, and how they felt and reasoned about moral questions, all of that can be now better understood with the help of insights from cognitive science. Istvan Czachesz argues that the field of New Testament Studies witnesses the beginning of a cognitive turn. He surveys relevant developments in the Cognitive

Science of Religion and explores the field of cognitive and behavioral sciences in search of opportunities of gaining new insights about biblical materials Czachesz presents some methodological tools and initial steps together with a large number of examples of applying the cognitive approach to the New Testament and related ancient literature **Writing** Elena L. Grigorenko,Elisa Mambrino,David D. Preiss,2012-05-04 This book captures the diversity and richness of writing as it relates to different forms of abilities skills competencies and expertise Psychologists educators researchers and practitioners in neighboring areas are interested in exploring how writing develops and in what manner this development can be fostered but they lack a handy unified and comprehensive source of information to satisfy their interest The goal of this book is to fill this void by reflecting on the phenomenon of writing from a developmental perspective It contains an integrated set of chapters devoted to issues of writing how writing develops how it is and should be taught and how writing paths of development differ across writing genres Specifically the book addresses typologies of writing pathways of the development of writing skills stages of the development of writing individual differences in the acquisition of writing skills writing ability and disability teaching writing and the development and demonstration of expertise in writing *Transitions Between Consciousness and Unconsciousness* Marcus Rothkirch,Morten Overgaard,Guido Hesselmann,2018-03-13 Over the last years a large body of experimental data have been generated in the attempt to understand consciousness and its neural underpinnings In this respect particular interest has been paid to the attempt to distinguish between conscious experience and unconscious states which however may still be considered as mental states e g in virtue of their representational nature This is of course not without reason A deep understanding of that which specifically characterizes conscious states including neural correlates and cognitive functions may crucially inform the ambition of understanding the relation between experience and the physical world Nevertheless the question has historically been challenged by the fact that consciousness is available in the first person only not to other people including scientists Different methodological traditions and choices have led to quite different understandings of how conscious and unconscious states relate and diverse empirical work has been inspired and guided by various cognitive and neurobiological theories of consciousness The very diverse viewpoints include such different positions as the idea that unconscious states are associated with the very same functional characteristics as conscious states and the idea that no informational state that is available for action can be completely unconscious The Research Topic *Transitions between consciousness and unconsciousness* is therefore devoted to this particular question how to understand the relation and transition between consciousness and unconsciousness We hope that the reader will find the collected articles both informative and thought provoking and that this Research Topic will stimulate the scientific debate
