Reconstruction of the climate variability of the past 500 years is a topic of great scientific interest not only in global terms
but also at regional and local levels This period is interesting on account of the increasing influence of anthropogenic forcing
and its overlap with natural factors The Polish Climate in the European Context An Historical Overview summarises the
results of research into climate variability based on a combination of instrumental documentary dendrochronological and
borehole data from Poland The first part of the book provides a Central European perspective of research in these fields
which forms the general background for a presentation of the state of the art of climatic change studies in Poland during the
past 500 years Part 2 This is followed by a selection of papers dealing mainly with different aspects of climate variability in
Poland and Central Europe Part 3 This book is a valuable tool integrating Polish Central and Eastern European climate
research into the global context It is as such a must for climate researchers worldwide Gaston Demar e Royal Meteorological
