## **First Day Of Sixth Grade Math Activity:**

**Lessons from the Lobster** Charlotte Nassim,2018-06-26 How forty years of research on thirty neurons in the stomach of a lobster has yielded valuable insights for the study of the human brain Neuroscientist Eve Marder has spent forty years studying thirty neurons on the stomach of a lobster Her focus on this tiny network of cells has yielded valuable insights into the much more complex workings of the human brain she has become a leading voice in neuroscience In *Lessons from the Lobster* Charlotte Nassim describes Marder s work and its significance accessibly and engagingly tracing the evolution of a supremely gifted scientist s ideas From the lobster s digestion to human thought is very big leap indeed Our brains selectively recruit networks from about ninety billion available neurons the connections are extremely complex Nevertheless as Nassim explains Marder s study of a microscopic knot of stomatogastric neurons in lobsters and crabs a small network with a countable number of neurons has laid vital foundations for current brain research projects Marder s approach is as intuitive as it is analytic but always firmly anchored to data Every scrap of information is a pointer for Marder her discoveries depend on her own creative thinking as much as her laboratory s findings Nassim describes Marder s important findings on neuromodulation the secrets of neuronal networks and homeostasis Her recognition of the importance of animal to animal variability has influenced research methods everywhere Marder has run her laboratory at Brandeis University since 1978 She was President of the Society for Neuroscience in 2008 and she is the recipient of numerous awards including the 2016 Kavli Award in Neuroscience and the 2013 Gruber Prize in Neuroscience Research that reaches the headlines often depends on technical fireworks and especially on spectacular images Marder s work seldom fits that pattern but this book demonstrates that a brilliant scientist working carefully and thoughtfully can produce groundbreaking results *The Power of Middle School* Keen J. Babbage,2012-09-14 The middle school years are a maze of academic duties human growth and self development discovering self identity and increasing social interaction with other people This maze can be an adventure of achievement and opportunity or it can be a struggle of difficulty and disappointment As these experiences are the impetus or foundation for many later achievements in academics careers and personal life it is imperative that educators maximize these formative years by helping middle school students successfully travel through this maze despite its ups and downs its twists and turns and its new challenges to master and the old issues to resolve For instance educators must support students who have fallen behind so as to thwart their reduced likelihood of turnaround in high school Likewise educators must challenge exceptional students in order to perpetuate their enthusiasm for learning and prepare them for college studies By discussing the comprehensive roles and duties of school administrators counselors and teachers *The Power of Middle School* addresses how to maximize middle school curriculum and extra curricular activities for the academic personal and professional benefits of all students **Beautiful Risks** Ronald A. Beghetto,2018-12-14 This book is about knowing when creative action is worth the risk and when it is not This includes developing the awareness courage and confidence to support and take risks when it

is beneficial to do so in the classroom It also includes being able to recognize when certain risks should be avoided The key is knowing when and how to take creative action in a way that not only makes sense for the situation at hand but also stands to make a positive contribution to others The aim of this book is to help you and your students identify the kinds of risks that are worth taking better anticipate and navigate potential hazards associated with those risks and maximize the potential benefits
