Internal Anatomy:

1. Incision at anus. Begin by inserting a fine scalpel blade into the anus (also called the vent) of the fish. The anus is located just anterior to (in front of) the anal fin, on the ventral (lower) side of the fish in most fishes.

2. Cutting anteriorly. The incision is then extended anteriorly along the fish's belly towards the head.

3. Cut between pelvic fins. The incision passes anteriorly between the pelvic (ventral) fins. Depending on the type of fish, these paired fins are used to stabilise the fish when swimming and also for braking. The pelvic fins are supported by the bones of the pelvic girdle which are anchored in the belly muscles.

4. Cut along isthmus. Use scissors to cut anteriorly through the bones attached to the pelvic fins. Cut forward along the narrow, fleshy space beneath the head and between the gill covers. The gill covers (also known as operculae) are flaps which lie along both sides of the head and protect the underlying gills.

5. Body cavity. Pull apart the two walls of the body cavity and expose the internal organs (see next image for names). The neat incision now runs from the anus forward between the two pelvic fins and along the isthmus.

6. Internal organs. Some of the ventrally located internal organs: 1 heart, 2 Liver, 3 Pyloric caecae, 4 adipose (fatty) tissue
