advanced undergraduates and beginning graduate students to the techniques of recombinant DNA technology or gene
cloning and expression The techniques used in basic research and biotechnology laboratories are covered in detail Students
gain hands on experience from start to finish in subcloning a gene into an expression vector through purification of the
recombinant protein The third edition has been completely re written with new laboratory exercises and all new illustrations
and text designed for a typical 15 week semester rather than a 4 week intensive course The project approach to experiments
was maintained students still follow a cloning project through to completion culminating in the purification of recombinant
protein It takes advantage of the enhanced green fluorescent protein students can actually visualize positive clones following
