

Hormonal Regulatory Systems

Key Idea: The endocrine system regulates physiological processes by releasing blood borne chemical messengers (called hormones) which interact with target cells. The endocrine system is made up of endocrine cells (organized into endocrine glands) and the hormones they produce. Hormones are potent chemical regulators. They are

produced in very small quantities but can exert a very large effect on metabolism. Endocrine glands secrete hormones directly into the bloodstream rather than through a duct or tube. The basis of hormonal control and the role of negative feedback mechanisms in regulating hormone levels are described below.

How Hormones Work

Endocrine cells produce hormones and secrete them into the bloodstream where they are distributed throughout the body. Although hormones are sent throughout the body, they affect only specific target cells. These target cells have receptors on the plasma membrane which recognize and bind the hormone (see next, below). The binding of hormone and receptor triggers the response in the target cell. Cells are unresponsive to a hormone if they do not have the appropriate receptors.

Antagonistic Hormones

The effects of one hormone are often counteracted by an opposing hormone. Feedback mechanisms adjust the balance of the two hormones to maintain a physiological function. Example: insulin acts to decrease blood glucose and glucagon acts to raise it.

1. (a) What are antagonistic hormones? Describe an example of how two such hormones operate:

(b) Describe the role of feedback mechanisms in adjusting hormone levels (explain using an example if this is helpful):

2. How can a hormone influence only the target cells even though all cells may receive the hormone?

3. Explain why hormonal control differs from nervous system control with respect to the following:

(a) The speed of hormonal responses is slower: _____

(b) Hormonal responses are generally longer lasting: _____

Human Physiology Robert F. Schmidt, Gerhard Thews, 2012-12-06 This book first appeared in English in 1983 as a translation of the 20th Edition of the long established German textbook Physiologie des Menschen In this new English edition the text has been fundamentally rejuvenated to bring it up to date with the rapid advances in many areas of physiology and to incorporate many helpful suggestions from both readers and colleagues In its scope and didactic goals the book remains as we set forth in the Preface to the First Edition which follows First the content was substantially reorganized The general aspects of cell physiology and intercellular communication which underlie the functions of all organs were extracted from the various chapters and brought together in a separate introductory section We are most grateful to our colleague J DUDEL for undertaking this task The second step was to make the text more concise in several places for instance the motor and

somatovisceral systems previously occupied two chapters and have now been condensed into one By these processes of condensation and distillation of the passages on general cell physiology space was made for the necessary additions and expansions with only a slight change in the overall length of the book **Illustrated Manual of Nursing Practice**, 2002 Completely revised and updated this broad yet comprehensive edition contains twenty nine chapters on nursing issues and clinical practice Topics cover practice and process documentation legal issues health promotion physical assessment I V therapy surgical care and more Disorders are organized by body system and feature an overview of anatomy and physiology assessment diagnostic tests medication treatment and home care with coverage of care for maternal neonatal pediatric geriatric emergency and psychiatric patients Added features include grabbing nursing procedure graphics complementary therapies clinical pathways and cultural information Over 1 000 illustrations charts and graphs enhance the text with a new appendix relating Internet sites for nurses **Pathophysiology** Lippincott Williams & Wilkins, 2005 This unique 2 in 1 reference presents vital information on pathophysiology in two helpful ways on every page The wide inner column contains detailed narrative text the narrow outer column contains brief bulleted summaries of the same information This format enables nurses to quickly scan the bulleted points and jump to in depth information as needed without turning the page Organized by body system the book covers 220 diseases and disorders Two 8 page full color inserts illustrate selected disorders Illustrations and flowcharts demonstrate abnormal structures and pathophysiologic processes Icons highlight complications life threatening disorders emergency interventions and effects of treatment on disease processes

Hormonal Regulation of Development I J. MacMillan, 1980-12-01 This is the first of the set of three volumes in the Encyclopedia of Plant Physiology New Series that will cover the area of the hormonal regulation of plant growth and development The overall plan for the set assumes that this area of plant physiology is sufficiently mature for a review of current knowledge to be organized in terms of unifying principles and processes Reviews in the past have generally treated each class of hormone individually but this set of volumes is subdivided according to the properties common to all classes Such an organization permits the examination of the hypothesis that differing classes of hormones acting according to common principles are determinants of processes and phases in plant development Also in keeping with this theme a plant hormone is defined as a compound with the properties held in common by the native members of the recognized classes of hormone Current knowledge of the hormonal regulation of plant development is grouped so that the three volumes consider advancing levels of organizational complexity viz molecular and subcellular cells tissues organs and the plant as an organized whole and the plant in relation to its environment The present volume treats the molecular and subcellular aspects of hormones and the processes they regulate Although it deals with chemically distinct classes of hormone this volume stresses properties and modes of studying them that are common to all classes **Cell-specific, Developmental, and Hormonal Regulation of Corticotropin-releasing Hormone Gene Expression in Transgenic Mice** Catherine Elizabeth Harnden
