Frequent illustrations clearly depict what you see on your screen to help you in following the steps outlined.

Dynamical Systems with Applications using Maple™ Stephen Lynch, 2009-12-23 Since the first edition of this book was published in 2001, the algebraic computation package Maple has evolved from Maple V into Maple 13. Accordingly, the second edition has been thoroughly updated and new material has been added. In this edition, there are many more applications, examples, and exercises, all with solutions, and new chapters on neural networks and simulation have been added. There are also new sections on perturbation methods, normal forms, Gröbner bases, and chaos synchronization. This book provides an introduction to the theory of dynamical systems with the aid of the Maple algebraic manipulation package. It is written for both senior undergraduates and graduate students. The first part of the book deals with continuous systems using ordinary differential equations. Chapters 1-10, the second part, is devoted to the study of discrete dynamical systems. Chapters 11-15 and Chapters 16-18 deal with both continuous and discrete systems. Chapter 19 lists examination-type questions used by the author over many years, one set to be used in a computer laboratory with access to Maple and the other set to be used without access to Maple. Chapter 20 lists answers to all of the exercises given in the book. It should be pointed out that dynamical systems theory is not limited to these topics but also encompasses partial differential equations, integral and integro-differential equations, stochastic systems, and time delay systems, for instance. References 1-5 given at the end of the Preface provide more information for the interested reader.

Applications of Abstract Algebra with Maple and MATLAB, Second Edition Richard Klima, Neil P. Sigmon, Ernest Stitzinger, 2006-07-12 Eliminating the need for heavy number crunching, sophisticated mathematical software packages open the door to areas like cryptography, coding theory, and combinatorics that are dependent on abstract algebra. *Applications of Abstract Algebra with Maple and MATLAB, Second Edition* explores these topics and shows how to apply the software programs to abstract algebra and its related fields. Carefully integrating Maple™ and MATLAB, this book provides an in-depth introduction to real-world abstract algebraic problems. The first chapter offers a concise and comprehensive review of prerequisite advanced mathematics. The next several chapters examine block designs, coding theory, and cryptography, while the final chapters cover counting techniques including Pólya's and Burnside's theorems. Other topics discussed include the Rivest-Shamir and Adleman RSA cryptosystem, digital signatures, primes for security, and elliptic curve cryptosystems. New to the Second Edition: Three new

chapters on Vigen re ciphers the Advanced Encryption Standard AES and graph theory as well as new MATLAB and Maple sections Expanded exercises and additional research exercises Maple and MATLAB files and functions available for download online and from a CD ROM With the incorporation of MATLAB this second edition further illuminates the topics discussed by eliminating extensive computations of abstract algebraic techniques The clear organization of the book as well as the inclusion of two of the most respected mathematical software packages available make the book a useful tool for students mathematicians and computer scientists
