

**Environmental Chemistry**

The study of the chemical and physical processes that occur in the environment, and the impact of human activities on these processes. It is a multidisciplinary field that draws on chemistry, physics, biology, and geology. Environmental chemists study the fate and transport of pollutants in the atmosphere, water, and soil, and the effects of these pollutants on living organisms. They also study the natural cycles of elements and the role of trace elements in biological systems. Environmental chemistry is a rapidly growing field, and it is expected to continue to play an important role in addressing the environmental challenges of the future.
