

INTRODUCTION TO MICROECONOMICS

MICROECONOMICS - it is a study of how individual actors make choices in response to changes in incentives, prices, resources, methods of production.

In microeconomics, we study how we make decisions as we know we don't have all the time and money to purchase everything; also, we have scarce resources. Microeconomics examines how these decisions and behaviors influence the supply and demand of goods and services and the price consumer pay. These prices influence the quantity of goods, business supply and the number of goods, customer's demand. Unlike macroeconomics, which emphasizes understanding and modeling collective behavior, microeconomics focuses on the decision-making process of individual entities within an economy.

Microeconomics is the social science that studies the implications of incentives and decisions and how they affect the utilization and distribution of resources on an individual level.

Microeconomics shows how and why different goods have different values. It addresses how individuals and businesses conduct and benefit from efficient production and exchange and how individuals can best coordinate and cooperate with each other.

KEY TAKEAWAYS:

- Micro-economics deals with prices and production in single markets and the interaction between markets.
- Microeconomics leaves the study of economy-wide aggregates to macroeconomics.
- Micro-economists form various types of models based on logic and observed human behavior and they test the models against real-world observations.
