Labview Advanced Tutorial:

Advanced LabVIEW Labs John Essick,1999 Advanced LabVIEW Labs provides a structured introduction to LabVIEW based laboratory skills The book can be used as a stand alone tutorial or as a college level instructional lab text The reader learns the LabVIEW programming language while writing meaningful programs that explore useful data analysis techniques numerical integration and differentiation least squares curve fitting Fast Fourier Transform and the mechanics of computer based experimentation using National Instruments DAQ and GPIB boards During the course of the book the reader constructs and investigates the proper usage of several computer based instruments including a digitizing oscilloscope spectrum analyzer and PID temperature control system as well as learns to control an instrument through the General Purpose Interface Bus

Learning with LabVIEW 6i Robert H. Bishop,2001 Defined as The science about the development of an embryo from the fertilization of the ovum to the fetus stage embryology has been a mainstay at universities throughout the world for many years Throughout the last century embryology became overshadowed by experimental based genetics and cell biology transforming the field into developmental biology which replaced embryology in Biology departments in many universities Major contributions in this young century in the fields of molecular biology biochemistry and genomics were integrated with both embryology and developmental biology to provide an understanding of the molecular portrait of a development cell That new integrated approach is known as stem cell biology it is an understanding of the embryology and development together at the molecular level using engineering imaging and cell culture principles and it is at the heart of this seminal book Stem Cells and Regenerative Medicine From Molecular Embryology to Tissue Engineering is completely devoted to the basic developmental cellular and molecular biological aspects of stem cells as well as their clinical applications in tissue engineering and regenerative medicine It focuses on the basic biology of embryonic and cancer cells plus their key involvement in self renewal muscle repair epigenetic processes and therapeutic applications In addition it covers other key relevant topics such as nuclear reprogramming induced pluripotency and stem cell culture techniques using novel biomaterials A thorough introduction to stem cell biology this reference is aimed at graduate students post docs and professors as well as executives and scientists in biotech and pharmaceutical companies
