# CHAPTER 6
## ARRAYS IN C

1.  Define array. Why do we use arrays in computer program?

Ans: Array is a collection of similar data items where elements are stored in contiguous memory location.

We use array to store multiple values in a single variable, instead of declaring separate variable for each value.

2.  Can we store both integer and float types of data in a single array? Demonstrate this by writing a C program.

Ans: We cannot not store both integer and float types of data in a single array because an array can store only similar types of data.

```c
#include<stdio.h>

int main()
{
    int  i, a[5]={3,6,4,5,12};
    printf("The arary elements are:\n");
    for(i=0; i<5; i++)
    printf("%d\t", a[i]);
    return 0;
}
```

In the above example, an integer type array is initialized. All the values are also integer type, i.e according to the property of array it can store only homogenous data, we cannot store value other than integer in the declared array. To store float types of data we need to declare float type array separately.

3.  Write the indices of the first and last element of the following array declaration.
    char city[7]={'S', 'I', 'L', 'C', 'H', 'A', 'R'};

Ans: The indices of the first and last element i.e 'S' and 'R' is 0 and 6 respectively.

Elementary Convexity with Optimization Vivek S. Borkar,K. S. Mallikarjuna Rao,2023-06-26 This book develops the concepts of fundamental convex analysis and optimization by using advanced calculus and real analysis Brief accounts of advanced calculus and real analysis are included within the book The emphasis is on building a geometric intuition for the subject which is aided further by supporting figures Two distinguishing features of this book are the use of elementary alternative proofs of many results and an eclectic collection of useful concepts from optimization and convexity often needed by researchers in optimization game theory control theory and mathematical economics A full chapter on optimization algorithms gives an overview of the field touching upon many current themes The book is useful to advanced undergraduate and graduate students as well as researchers in the fields mentioned above and in various engineering disciplines

*Deterministic Observation Theory and Applications* Jean-Paul Gauthier,Ivan Kupka,2001-10-08 This 2001 book presents a general theory as well as a constructive methodology to solve observation problems that is reconstructing the full information about a dynamical process on the basis of partial observed data A general methodology to control processes on the basis of the observations is also developed Illustrative but also practical applications in the chemical and petroleum industries are shown This book is intended for use by scientists in the areas of automatic control mathematics chemical engineering and physics *An Invitation to Statistics in Wasserstein Space* Victor M. Panaretos,Yoav Zemel,2020-03-10 This open access book presents the key aspects of statistics in Wasserstein spaces i e statistics in the space of probability measures when endowed with the geometry of optimal transportation Further to reviewing state of the art aspects it also provides an accessible introduction to the fundamentals of this current topic as well as an overview that will serve as an invitation and catalyst for further research Statistics in Wasserstein spaces represents an emerging topic in mathematical statistics situated at the interface between functional data analysis where the data are functions thus lying in infinite dimensional Hilbert space and non Euclidean statistics where the data satisfy nonlinear constraints thus lying on non Euclidean manifolds The Wasserstein space provides the natural mathematical formalism to describe data collections that are best modeled as random measures on Euclidean space e g images and point processes Such random measures carry the infinite dimensional traits of functional data but are intrinsically nonlinear due to positivity and integrability restrictions Indeed their dominating statistical variation arises through random deformations of an underlying template a theme that is pursued in depth in this monograph **Multiobjective Decision Making** Vira Chankong,Yacov Y Haimes,2008-02-04 This first rate text explores the theory and methodology of systems engineering in evaluating alternative courses of action and associated decision making policies It treats criteria as multidimensional rather than scalar in the development of normative theories These contribute to a behavioral theory of decision making and provide guidance for exercising judgment An introductory discussion of the systemic approach to judgment and decision is followed by explorations of psychological value

measurements utility classical decision analysis and vector optimization theory The second section chiefly deals with methods of assessing and evaluating alternatives including both noninteractive and interactive methods A taxonomy and a comparative evaluation of methods conclude the text **Computer Aided Design of Multivariable Technological Systems** G. G. Leininger,2014-05-16 Computer Aided Design of Multivariable Technological Systems covers the proceedings of the Second International Federation of Automatic Control IFAC The book reviews papers that discuss topics about the use of Computer Aided Design CAD in designing multivariable system such as theoretical issues applications and implementations The book tackles several topics relevant to the use of CAD in designing multivariable systems Topics include quasi classical approach to multivariable feedback system designs fuzzy control for multivariable systems root loci with multiple gain parameters multivariable frequency domain stability criteria and computational algorithms for pole assignment in linear multivariable systems The text will be of great use to professionals whose work involves designing and implementing multivariable systems **Mathematical Programming and Control Theory** B. D. Craven,2012-12-06 In a mathematical programming problem an optimum maxi mum or minimum of a function is sought subject to con straints on the values of the variables In the quarter century since G B Dantzig introduced the simplex method for linear programming many real world problems have been modelled in mathematical programming terms Such problems often arise in economic planning such as scheduling industrial production or transportation but various other problems such as the optimal control of an interplanetary rocket are of similar kind Often the problems involve nonlinear func tions and so need methods more general than linear pro gramming This book presents a unified theory of nonlinear mathe matical programming The same methods and concepts apply equally to nonlinear programming problems with a finite number of variables and to optimal control problems with e g a continuous curve i e infinitely many variables The underlying ideas of vector space convex cone and separating hyperplane are the same whether the dimension is finite or infinite and infinite dimension makes very little difference to the proofs Duality theory the various nonlinear generaliz ations of the well known duality theorem of linear program ming is found relevant also to optimal control and the PREFACE Pontryagin theory for optimal control also illuminates finite dimensional problems The theory is simplified and its applicability extended by using the geometric concept of convex cones in place of coordinate inequalities **H-infinity Control and Estimation of State-multiplicative Linear Systems** Eli Gershon,Uri Shaked,Isaac Yaesh,2005-06-24 Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector Such systems are relevant for example in radar measurements where larger ranges involve higher noise level This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions Topics covered include convex H2 and H infinity norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic
