Cardiometabolic disease CMD is a critical area of research due to its status as the leading cause of mortality worldwide responsible for one third of all global deaths with a significant impact on middle and low income countries The current challenge in CMD research lies in the limited predictive capabilities of classical risk factors necessitating the development of more accurate molecular predictors Recent studies have highlighted the potential of various circulating biomarkers such as C reactive protein CRP leptin and adiponectin in assessing CMD risk Furthermore emerging evidence suggests the involvement of novel biomarkers including cytokines metabolites apelin microRNAs inflammasome molecules and cardiac fibrosis markers Despite these advancements there remains a gap in large scale meta analyses to confirm their roles in CMD diagnosis and prognosis Addressing this gap requires innovative approaches such as integrating multi omics analyses to create a comprehensive molecular framework for CMD and identify effective biomarkers This Research Topic aims to explore novel and promising research and clinical trends in the identification characterization assessment and application of molecular biomarkers for CMD The primary objective is to encourage the discovery and evaluation of new biomarkers that can enhance risk assessment screening diagnosis and prognosis of CMD By leveraging high throughput methodologies the research seeks to critically evaluate the roles of genetic and epigenetic factors in CMD associated complications such as insulin resistance type 2 diabetes and cardiovascular disease The goal is to systematically assess their potential applications as molecular biomarkers ultimately improving CMD management and outcomes To gather further insights in the identification and application of molecular biomarkers for CMD we welcome articles addressing but not limited to the following themes

Identification and experimental validation of novel molecular biomarkers of CMD Investigation of novel genetic epigenetic and biochemical biomarkers of CMD Experimental and clinical evaluation of miRNAs as potential epigenetic biomarkers of CMD Use of combinations of biomarkers and panels of biomarkers for CMD risk prediction diagnosis and prognosis Machine learning as a tool for the identification of potential novel molecular biomarkers of CMD We are interested in publishing reviews and research articles that contribute to this evolving field Directory of British Associations & Associations in Ireland S.
