

How to solve Multistep Equations

1. Simplify each side
2. Eliminate the variable from the right side
3. Eliminate the constant term from the left side
4. Divide each side by the coefficient

Example:

$$3(x + 1) = 5 + x$$

$$3x + 3 = 5 + x$$

$$2x + 3 = 5$$

$$2x = 2$$

$$x = 1$$

Example:

$$2(x + 2) - 5 = 3(x + 1)$$

$$2x - 1 = 3x + 3$$

$$-x - 1 = 3$$

$$-x = 4$$

$$x = -4$$

Integration of Equations of Parabolic Type by the Method of Nets V. K. Saul'Yev,2014-07-10 International Series of Monographs in Pure and Applied Mathematics Volume 54 Integration of Equations of Parabolic Type by the Method of Nets deals with solving parabolic partial differential equations using the method of nets The first part of this volume focuses on the construction of net equations with emphasis on the stability and accuracy of the approximating net equations The method of nets or method of finite differences used to define the corresponding numerical method in ordinary differential equations is one of many different approximate methods of integration of partial differential equations The other methods and some based on newer equations are described By analyzing these newer methods older and existing methods are evaluated For example the asymmetric net equations the alternating method of using certain equations and the method of mean arithmetic and multi nodal symmetric method point out that when the accuracy needs to be high the requirements for stability become more defined The methods discussed are very theoretical and methodological The second part of the book concerns the practical numerical solution of the equations posed in Part I Emphasis is on the commonly used iterative methods that are programmable on computers This book is suitable for statisticians and numerical analysts and is also recommended for scientists and engineers with general mathematical knowledge

Math Is Easy So Easy, Algebra I Nathaniel Max Rock,2008-02 There are many self help math books available but none are quite like this one Math Is Easy So Easy first separates math topics into those which are essential and nonessential The struggling math student and parent of a struggling math student must be able to focus on the math topics which will return the greatest effect in the shortest amount of time Furthermore math teachers and math textbooks simply try to cover too much material the bulk of which has no impact on a student s successful completion of math up through calculus in high school Second Math Is Easy So Easy tries to provide clarity of instruction for a few problems which cover the important aspects of the essential topics Contrary to most math teacher instruction it is more important and beneficial to know a few key problems well than to try to cover many problems only superficially If you are the parent of a student who is struggling in math you know how frustrating it can be to get to the bottom of what your student really needs to know to survive and persist in math up through calculus in high school You also know how important it is that your student stay in math as long as possible in high school so that they are better prepared to enter and succeed in college You also no doubt know how seemingly unreasonable your struggling student s math teacher can be in terms of communicating with you and your student As a math teacher for many years now Max wrote this book to help you and your struggling math student survive math with as few I hate math outbursts as possible Lastly Max has personally witnessed many students who struggle in math in high school who then go on to mature into great engineers and scientists This book will help your student to stay in math longer and be more successful There is a separate book for each of six math classes 7th Grade Math Algebra I Geometry I Algebra II Math Analysis and Calculus There is a single Combo book with all six books in one Make sure you get the right book for your needs Nathaniel Max Rock an engineer by training has taught math in middle school and high school including math classes 7th
