The Burning Answer Keith Barnham, 2015-05-15 Our society faces a choice We could be enjoying a sustainable lifestyle but we have chosen not to In three generations we have consumed half the oil produced by photosynthesis over eight million generations In two generations we have used half our uranium resources With threats from global warming oil depletion and nuclear disaster we are running out of options Solar power as Keith Barnham says is our necessary solution Barnham explains that the roots of solar energy lie in a little known equation $E = hf$ an equation which was coincidentally celebrated and explained to the world by Einstein in the same year he discovered $E = mc^2$ He alleges that the former equation has been overlooked in favor of the latter much to our detriment and Barnham is here to offer us a solution We can still turn things around and solar energy is the key In this provocative inspiring passionately argued book Keith Barnham outlines actions that any one and all of us can take to make an impact now and on future generations The Burning Answer is a solar manifesto for the new climate aware generation and a must read for climate change skeptics

Food Production and Nature Conservation Iain J. Gordon, Herbert H.T. Prins, Geoff R. Squire, 2016-11-25 Feeding the world's growing human population is increasingly challenging especially as more people adopt a western diet and lifestyle Doing so without causing damage to nature poses an even greater challenge This book argues that in order to create a sustainable food supply whilst conserving nature agriculture and nature must be reconnected and approached together The authors demonstrate that while the links between nature and food production have to some extent already been recognized until now the focus has been to protect one from the impacts of the other Instead it is argued that nature and agriculture can and should work together and ultimately benefit from one another Chapters describe efforts to protect nature through globally connected protected area systems and illustrate how farming methods are being shaped to protect nature within agricultural systems The authors also point to many ways in which nature benefits agriculture through the ecosystem services it provides Overall the book shows that nature conservation and food production must be considered as equally important components of future solutions to meet the global demand for food in a manner that is sustainable for both the human population and the planet as a whole
