

Unit 15 - Medical Entomology

Introduction

Direct Medical Effects

1. How is annoyance a direct medical effect to humans?
 this goes hand in hand with exsanguination which is loss of blood and annoyance (rasping mouthparts). Insects do not usually cause enough blood loss to be a problem in humans, but annoyance is sufficient enough to disrupt regular activities and cause significant economic losses. Minor annoyances can lead to cognitive distress, and this is also considered a direct medical effect.

2. What organisms can cause dermatosis and dermatitis?
 Scabies mites and chiggers/red bugs

3. What is myiasis?
 when Diptera larvae invade and feed on living tissue and create holes in flesh to get air from outside host to breathe. There are two different forms: obligatory (depends on host) and facultative (free living but can utilize host)

4. Define envenomation:
 arthropod venom from bite, stings, urticating hairs or stored chemicals can cause irritation and pain, itching, etc in humans. Typically does not cause death unless sensitivities present

5. Give three different insect examples of envenomization.
 Spider bites, scorpion stings, hymenoptera stings, etc

6. 37% of the people allergic to chocolate were not actually allergic to cocoa but to what?
 cockroach parts: molted exoskeletons and frass

7. Do you have delusory parasitosis?
 When a person is mentally sure that an insect infestation is real when it does not exist. Can bring about physical symptoms.

Indirect effects

1. What is the primary indirect medical effect of insects?
 Disease transmission and entomophobia - psychological fear of insects which can lead to problems such as delusory parasitosis or stress and high anxiety leading to reckless or careless use of insecticides

2. Define vector:
 classes of arthropods that have the capability of transmitting pathogenic organisms to its host, causing minor or major debilitating illnesses
