Enough of Experts Cara Reed, Michael Reed, 2023-05-08 Enough of Experts Expert Authority in Crisis analyses the challenges and threats to expert authority in neoliberal political economies and societies It focuses upon the deep seated political economic social and cultural transformations which have fundamentally destabilized and eroded the institutional foundations of expert authority over more than four decades The book critically assesses the orthodox or received model of expert authority as it has come under escalating pressures from a nexus of ideological organizational technological and cultural changes that have radically weakened the former's core institutional logic and practical efficacy It also looks forward to a range of expert futures in which expert groups and organizations decline in power and status as their prevalence proliferates to a stage where they become ubiquitous in neoliberal regimes Finally the book presents an alternative reflexive model of expert authority and governance that is grounded in the dynamics of contestation and trust and stands in direct contrast to the orthodox rational model

Elements of Human Performance Andries F. Sanders, Andries Sanders, 2013-02-01 This book presents a review of research on reaction processes and attention as it has evolved over the last 40 years in the context of the information processing tradition in cognitive psychology It is argued and demonstrated that issues of reaction processes and attention are closely interconnected Their common conceptualization can be seen in terms of limited processing capacity on the one hand and stage analysis on the other This volume concludes that at present a stage analysis metaphor offers better prospects as a conceptual starting point the limited capacity metaphor was strongly tied to

the digital computers of the 60s The emphasis of the book is on behavioral research but summaries of related findings on evoked potentials and other psychophysiological variables are included as well From this perspective it may be of interest to neuropsychologists who want to learn about the present state of cognitive experimental paradigms Elements of Human Performance also addresses the question of the relationship between basic research and applications in the said areas This is particularly urgent in view of the now common notion that the results of many simplified laboratory tasks may be artifactual and of little applied value A back to back research strategy is outlined to assess the validity of basic research results for real life tasks Scribners Monthly Josiah Gilbert Holland, Richard Watson Gilder, 1872 Aero Club of America Bulletin , 1912
