## **Luenberger Chapter Solution:**

H-infinity Control and Estimation of State-multiplicative Linear Systems Eli Gershon, Uri Shaked, Isaac Yaesh, 2005-06-24  
Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector. Such systems are relevant for example in radar measurements where larger ranges involve higher noise level. This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions. Topics covered include convex  $H_2$  and  $H_\infty$  norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic and static output feedback of stochastic bilinear systems tracking controllers for stochastic bilinear systems utilizing preview information. Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered two such examples are taken from the aerospace and guidance control areas.

An Invitation to Statistics in Wasserstein Space Victor M. Panaretos, Yoav Zemel, 2020-03-10  
This open access book presents the key aspects of statistics in Wasserstein spaces i.e. statistics in the space of probability measures when endowed with the geometry of optimal transportation. Further to reviewing state of the art aspects it also provides an accessible introduction to the fundamentals of this current topic as well as an overview that will serve as an invitation and catalyst for further research. Statistics in Wasserstein spaces represents an emerging topic in mathematical statistics situated at the interface between functional data analysis where the data are functions thus lying in infinite dimensional Hilbert space and non Euclidean statistics where the data satisfy nonlinear constraints thus lying on non Euclidean manifolds. The Wasserstein space provides the natural mathematical formalism to describe data collections that are best modeled as random measures on Euclidean space e.g. images and point processes. Such random measures carry the infinite dimensional traits of functional data but are intrinsically nonlinear due to positivity and integrability restrictions. Indeed their dominating statistical variation arises through random deformations of an underlying template a theme that is pursued in depth in this monograph.

Lee, 2023-02-24 In today's competitive environment airlines are doing everything they can to improve efficiency and productivity. Productivity and Efficiency Measurement of Airlines Data Envelopment Analysis using R identifies and explains sources of airline efficiency and helps achieve these goals through the use of state-of-the-art measurement techniques. Each chapter measures airline performance through the data envelopment analysis (DEA) model and other DEA variants. This book thoroughly discusses topics such as cost and revenue efficiency, performance, carbon emissions, performance management, and complex airline data analysis, employing appropriate models for each. Model methodologies are also discussed. The in-depth coverage is useful for all audiences, including students with a basic understanding of models, researchers, and airline operators and management. Productivity and Efficiency Measurement of Airlines Data Envelopment Analysis using R provides R codes to help readers generate results and quantify efficient practices. These results provide airline decision makers with the essential information they need to create better policies and avoid underperforming practices. Thoroughly summarizes key DEA measurement models for productivity and efficiency of airlines. Guides users in generating airline performance results using DEA model and its variants. Features R codes useful for generating empirical results and best practices promoting quality policy and management decisions.      **Static and Dynamic Finite Element Analysis of Finite Deformation**

Modelling, Estimation, and Control of the Soaking Pit Yongzai Lü, Theodore Joseph Williams, 1983      **Investment Cycles and Sovereign Debt Overhang** Mark Aguiar, Manuel Amador, Gita Gopinath, 2007 We characterize optimal taxation of foreign capital and optimal sovereign debt policy in a small open economy where the government cannot commit to policy and seeks to insure a risk-averse domestic constituency. The expected tax on capital is shown to vary with the state of the economy, generating cyclicity in investment and debt in an environment where the first best capital stock is a constant. The government's lack of commitment induces a negative correlation between investment and the stock of government debt, a debt overhang effect. If the government discounts the future at a rate higher than the market, then capital oscillates.

indefinitely at a level strictly below the first best Debt relief is never Pareto improving and cannot affect the long run level of investment Further restricting the government to a balanced budget can eliminate the cyclical distortion of investment
