

# pH

Name \_\_\_\_\_

pH is a scale that measures the hydronium ion concentration of a solution. Therefore, the pH scale can be used to determine the acidity of a solution. A pH of less than 7 indicates an acidic solution, a pH of 7 is neutral, and a pH of greater than 7 up to 14 is basic. The lower the pH, the higher the acidity. The higher the pH, the lower the acidity.

Indicators are substances that change color at a different pH levels. Phenolphthalein is colorless in an acid and a neutral solution, pink in a base. Blue litmus changes to red in an acid, and remains blue in neutral and basic solutions. Red litmus remains red in acidic and neutral substances, but turns blue in bases.

Complete the following chart.

pH	Acid, Base, Neutral	Phenolphthalein	Blue Litmus	Red Litmus

## Measuring Liquids Physical Science If8767:

Measurement of Volume Richard E. Lawn, Richard Lawn, Florence Elizabeth Prichard, 2003 This document provides guidance on various important aspects of volume measurement as it is commonly carried out in analytical laboratories Although the measurement of volume with such items of equipment as pipettes graduated flasks syringes etc is seemingly a routine procedure the operation is by no means foolproof The analyst should approach volume measurement with the same care and critical appraisal that is or should be applied to the more exciting parts of an analytical investigation page 1

**New Methods of Measuring the Surface-tension of Liquids** Thomas Proctor Hall,1893 Measuring Solids and Liquids , A Rolling Bottle Device for Measuring the Flow of Liquids and Powders DN. Winslow,1979 The apparatus described in this paper is a simple and inexpensive device that allows the rapid measurement of a wide range of properties of both liquids and powders by measuring their flow The flow is measured by observing the horizontal distance that a bottle partially filled with a liquid or powder requires to come to a stop on a runway after it has been allowed to roll down a shallow ramp When liquids are tested the apparatus has been found useful for measuring viscosity temperature effects upon viscosity and concentrations of dissolved or suspended additives With powders it is sensitive to factors such as particle size and size distribution surface area particle roughness and shape and surface moisture It appears to have a wide ranging applicability as both a research tool and as a test method in many disparate fields
