Failure Analysis and Risk Assessment of Natural Disasters Through Machine Learning and Numerical Simulation, volume IV Faming Huang, Peng Zeng, Sansar Raj Meena, Jiawei Xie, 2025-08-26 Natural disasters which include landslides rock falls rainstorms floods and earthquakes appear as results of the progressive or extreme evolution of climatic tectonic and geomorphological processes and human engineering activities It is significant to explore the failure mechanism and carry out spatial modeling of these natural disasters due to their serious harm to the safety of people's lives and property Various advanced methods including successful remote sensing geographic information systems machine learning models and numerical simulation techniques are promising tools to analyze these complex disasters Machine Learning models such as neuro fuzzy logic decision trees artificial neural networks deep learning and evolutionary algorithms are characterized by their abilities to produce knowledge and discover hidden and unknown patterns and trends from large databases whereas remote sensing and Geographic Information Systems appear as significant technology equipped with tools for data manipulation and advanced mathematical modeling What is more numerical simulation can also be acknowledged as an advanced technology for discovering hidden failure mechanisms of disasters

Structural Dynamics Harry Grundmann, Gerhart I. Schuëller, 2002 The proceedings contain contributions presented by authors from more than 30 countries at EURO DYN 2002 The proceedings show recent scientific developments as well as practical applications they cover the fields of theory of vibrations nonlinear vibrations stochastic dynamics vibrations of structured elements wave propagation and structure borne sound including questions of fatigue and damping Emphasis is laid on vibrations of bridges buildings railway structures as well as on the fields of wind and earthquake engineering respectively Enriched by a number of keynote lectures and organized sessions the two volumes of the proceedings present an overview of the state of the art of the whole field of structural dynamics and the tendencies of its further development

Explosive Blast Injuries Zhengguo Wang, Jianxin Jiang, 2023-03-22 This book presents a systematic summary of a series of achievements of blast injury studies in China and the latest progress in blast injury treatment including injuries caused by various explosion accidents such as coal mine gas explosion and chemical explosion and terrorist bombing around the world over the past three decades The book not only covers comprehensive introductions to the knowledge and injury theories about explosive shock waves but also expounds the prevention and treatment of various explosion shock injuries and their complications with generalized summaries This book not only contains a diverse range of content but also immense practicality It elaborates on the causes of various types of explosion and impact injuries as well as protection and treatment measures serving not only as an important basis and technical support for military health service support in modern warfare but is also extremely important in providing practical value in peacetime disaster prevention mitigation and relief for patients

Performance Assessment of Conventional and Base-isolated Nuclear Power Plants for Earthquake and Blast Loadings Yin-Nan Huang,Andrew Stuart Whittaker,Nicolas Luco,2008 **Technical Report** ,2008 Extend MANPADS M & S Capabilities to Include Energetic Materials, Fragmentation Effects, and Wing Flutter Response Ronald L. Hinrichsen, Monty A. Moshier, Brian D. Choules,2005 The purpose of this effort is to create an analytical physics based aircraft MANPADS model capability that includes impact detonation penetration and wing flutter response This work extends an existing body on body missile model to include energetic materials fragmentation effects and wing flutter response due to dynamic air loads The detonation of the high explosive within the missile as well as the expansion of the surrounding fluids was modeled in the Eulerian domain The Jones Wilkins Lee JWL equation of state was used to model the explosive and the Gruneisen equation of state was used for the surrounding fluids Linear Boundary elements based on inviscid incompressible flow theory were coupled with the wing structure model to simulate air loads A modular approach was taken to separate the Eulerian domain and the JWL equation model from the model including the target Separating the models allows the complex physics to be mapped onto the missile including the target preserving the physics without the added costs Evaluation was done of various element failure criteria to increase model robustness Lastly the model was used to evaluate the dynamic air loads and response of wing flutter A physics based MANPADS model has been created which includes impact penetration detonation and fragmentation with drag
