

Chapter 8

Exponential Function

The function e^x .

I hope you have a live MATLAB and the `exp` functions handy. Enter the statement

```
exp(1)
```

Click on the blue line with your mouse. Move it until the green line is on top of the blue line. What is the resulting value of `a`?

The exponential function is denoted mathematically by e^x and in MATLAB by `exp(x)`. This function is the solution to the world's simplest, and perhaps most important, differential equation,

$$\dot{y} = ky$$

This equation is the basis for any mathematical model describing the time evolution of a quantity with a rate of production that is proportional to the quantity itself. Such models include populations, investments, feedback, and radioactivity. We are using t for the independent variable, y for the dependent variable, k for the proportionality constant, and

$$\dot{y} = \frac{dy}{dt}$$

for the rate of growth, or derivative, with respect to t . We are looking for a function that is proportional to its own derivative.

Let's start by examining the function

$$y = 2^t$$
