*Simple answer:* Organisms that are best adapted to their environment survive longer and have more offspring.

*Simple answer:* Natural selection is the process by which organisms with variations most suited to their local environment survive and leave more offspring. Over time, beneficial traits accumulate in a population.

Darwin's Devices John Long,2012-04-03 What happens when we let robots play the game of life br Darwin s Devices Long tells the story of these evolving biorobots how they came to be and what they can teach us about the biology of living and extinct species Evolving biorobots can replicate creatures that disappeared from the earth long ago showing us in real time what happens in the face of unexpected environmental challenges Biomechanically correct models of backbones functioning as part of an autonomous robot for example can help us understand why the first vertebrates evolved them But the most impressive feature of these robots as Long shows is their ability to illustrate the power of evolution to solve difficult technological challenges autonomously without human input regarding what a workable solution might be Even a simple robot can create complex behavior often learning or evolving greater intelligence than humans could possibly program This remarkable idea could forever alter the face of engineering design and even warfare An amazing tour through the workings of a fertile mind Darwin s Devices will make you rethink everything you thought you knew about evolution robot intelligence and life itself *Empiricism and Darwin's Science* F.
