[Techniques](#) Heather B. Miller,D. Scott Witherow,Sue Carson,2011-10-18 This manual is an indispensable tool for introducing  
advanced undergraduates and beginning graduate students to the techniques of recombinant DNA technology or gene  
cloning and expression The techniques used in basic research and biotechnology laboratories are covered in detail Students  
gain hands on experience from start to finish in subcloning a gene into an expression vector through purification of the  
recombinant protein The third edition has been completely re written with new laboratory exercises and all new illustrations  
and text designed for a typical 15 week semester rather than a 4 week intensive course The project approach to experiments  
was maintained students still follow a cloning project through to completion culminating in the purification of recombinant  
protein It takes advantage of the enhanced green fluorescent protein students can actually visualize positive clones following  
IPTG induction Cover basic concepts and techniques used in molecular biology research labs Student tested labs proven  
successful in a real classroom laboratories Exercises simulate a cloning project that would be performed in a real research  
lab Project approach to experiments gives students an overview of the entire process Prep list appendix contains necessary
