Chapter 12, “Developing PL/SQL Server Pages” describes an additional method for delivering using PL/SQL to generate HTML content. PL/SQL server pages enables you to build on your knowledge of HTML tags and avoid learning a new set of function calls. In an application written as a set of PL/SQL server pages, you can still use functions from the PL/SQL Web toolkit to do the following:

- Simplify the processing involved in displaying tables
- Store persistent data (cookies)
- Work with CGI protocol internals

## Passing Parameters to a PL/SQL Web Application

To be useful in a wide variety of situations, a Web application must be interactive enough to allow user choices. To keep the attention of impatient Web surfers, you should streamline the interaction so that users can specify these choices very simply, without excessive decision-making or data entry.

The main methods of passing parameters to PL/SQL Web applications are:

- Using HTML form tags. The user fills in a form on one Web page, and all the data and choices are transmitted to a stored procedure when the user clicks the Submit button on the page.
- Hard-coded in the URL. The user clicks on a link, and a set of predefined parameters are transmitted to a stored procedure. Typically, you would include separate links on your Web page for all the choices that the user might want.

This section contains the following topics:

- [Passing List and Dropdown List Parameters from an HTML Form](#)
- [Passing Radio Button and Checkbox Parameters from an HTML Form](#)
- [Passing Entry Field Parameters from an HTML Form](#)
- [Passing Hidden Parameters from an HTML Form](#)
- [Uploading a File from an HTML Form](#)
- [Submitting a Completed HTML Form](#)
