Forecasting** Matthias Karlbauer,2025-03-18 This thesis explores the potential of machine learning methods for improving
weather forecasts Since weather is considered a spatiotemporal process that evolves over space through time the thesis first
investigates the design choices required for machine learning models to simulate synthetic spatiotemporal processes such as
the two dimensional wave equation It then develops a method for analyzing machine learning models that enables the
extraction of unknown process relevant context that parameterizes an observed simulated spatiotemporal process of interest
Relating these extracted factors to physical properties leads the thesis to physics aware machine learning where it explores
how to fuse process knowledge from physics with the learning ability of artificial neural networks Given the insights from
those investigations a competitive deep learning weather prediction model is designed to understand which design choices
