

## Surface Modeling Tutorial

### Introduction

In this tutorial, you will create a toy race car body design using AutoCAD surface modeling techniques. The end result is shown in the illustration below.

### Creating the Sides

1. Open the drawing `Car_Body_Design.dwg` available on the companion website. In the current view, the front of the car is to the right, the back is to the left, the right side is nearest to you, and the left side is farthest from you.
2. Make sure the **SURFACEMODELINGMODE** system variable is set to 0 so that procedural surfaces are created. In addition, make sure the **SURFACEASSOCIATIVITY** system variable is set to 1 (on) so that associative surfaces are created. These settings can be verified in the **Create** panel on the **Surface** tab of the ribbon. The **Surface Associativity** button should be on (blue) and the **NURBS Creation** button should be off (white).
3. Turn on selection cycling and set the visual style to Wireframe.
4. Set the `Right_Side` layer current. Freeze the `Left_Side` layer.
