Catalog Handbook of Fine Chemicals Aldrich Chemical Company, 2003 **Design, Construction and Research Application of a Differential Electrochemical Mass Spectrometer (DEMS)** Sean James Ashton, 2012-07-11 Sean Ashton's doctoral thesis which he finished at the Technical University in Munich describes the challenge of constructing a Differential Electrochemical Mass Spectrometer instrument DEMS DEMS combines an electrochemical cell with mass spectrometry via a membrane interface allowing gaseous and volatile electrochemical reaction species to be monitored online The thesis carefully introduces the fuel cell electrocatalyst development concerns before reviewing the pertinent literature on DEMS This is followed by the presentation and discussion of the new extended design including a thorough characterization of the instrument The capabilities of the new setup are demonstrated in two research studies The methanol oxidation reaction on Pt and PtRu catalysts and the electrochemical corrosion of fuel cell catalyst supports Despite both topics having long since been studied new insights can be obtained through careful investigations with the new DEMS instrument that are of great general interest The thesis and the instrument thus show the way for future investigations in the field

Advanced Methods in Protein Microsequence Analysis Brigitte Wittmann-Liebold, Johann Salnikow, 2012-12-06 Much of the recent spectacular progress in the biological sciences can be attributed to the ability to isolate analyze and structurally characterize proteins and peptides which are present in cells and cellular organelles in only very small amounts Recent advances in protein chemistry and in particular the application of new micromethods have led to fruitful advances in the understanding of basic cellular processes Areas where protein chemical studies have resulted in interesting discoveries include the peptide hormones and their release factors growth factors and oncogenes bioenergetics proton pumps and ion pumps and channels topogenesis and protein secretion molecular virology and immunology membrane protein analysis and receptor research In fact the key methods are now on hand to unravel many of the major outstanding problems of molecular biology and in particular questions of fundamental interest which relate to developmental biology and specificity in cell-cell interaction In this volume we have assembled descriptions of procedures which have recently been shown to be efficacious for the isolation purification and chemical characterization of proteins and peptides that are only available in minute amounts Emphasis is placed on well established micromethods which have been tested and found useful in many laboratories by experienced investigators The chapters are written by specialists and describe a range of sensitive techniques which can be used by researchers working in laboratories with only modest resources and equipment
