

Chapter 2 The Chemistry of Biology

Atoms, Bonds, and Molecules

Matter: all tangible materials that occupy space and have mass

Atom: a tiny particle that cannot be subdivided into smaller substances without losing its properties

Properties of atoms:

- Protons (p^+): positively charged, found in the nucleus
- Neutrons (n^0): no charge, also found in the nucleus
- Electrons (e^-): negatively charged, surround the nucleus

Electron Orbitals and Shells

Atomic number: number of protons

Atomic mass: number of protons and neutrons

Orbital:

- Pathways in which electrons rotate around the nucleus

Models of Atomic Structure

Major Elements of Life and Their Primary

Characteristics 1

Element:

- An atom with a characteristic atomic structure and predictable chemical behavior

Bonds and Molecules 1

Molecule:

- A chemical substance that results from the combination of two or more atoms.
- O_2 , N_2

Compound:

- A molecule composed of two or more *different* elements.
- H_2O , $C_6H_{12}O_6$

Bonds and Molecules 2

Chemical bonds:

- Result when two or more atoms share, donate (lose), or accept (gain) electrons

Covalent Bonds and Polarity 1

Covalent bonds:

- Form between atoms that share electrons rather than donating or receiving them
- Single covalent bonds share a pair of electrons (H_2)

Henkel,2017-07-28 Tests of significance have been a key tool in the research kit of behavioral scientists for nearly fifty years
but their widespread and uncritical use has recently led to a rising volume of controversy about their usefulness This book
gathers the central papers in this continuing debate brings the issues into clear focus points out practical problems and
philosophical pitfalls involved in using the tests and provides a benchmark from which further analysis can proceed The
papers deal with some of the basic philosophy of science mathematical and statistical assumptions connected with
significance tests and the problems of the interpretation of test results but the work is essentially non technical in its
emphasis The collection succeeds in raising a variety of questions about the value of the tests taken together the questions
present a strong case for vital reform in test use if not for their total abandonment in research The book is designed for
practicing researchers those not extensively trained in mathematics and statistics that must nevertheless regularly decide if
and how tests of significance are to be used and for those training for research While controversy has been centered in
sociology and psychology and the book will be especially useful to researchers and students in those fields its importance is
great across the spectrum of the scientific disciplines in which statistical procedures are essential notably political science
economics and the other social sciences education and many biological fields as well Denton E Morrison is professor
