**Homological and Computational Methods in Commutative Algebra** Aldo Conca, Joseph Gubeladze, Tim

Römer, 2017-11-16 This volume collects contributions by leading experts in the area of commutative algebra related to the INdAM meeting Homological and Computational Methods in Commutative Algebra held in Cortona Italy from May 30 to June 3 2016 The conference and this volume are dedicated to Winfried Bruns on the occasion of his 70th birthday In particular the topics of this book strongly reflect the variety of Winfried Bruns research interests and his great impact on commutative algebra as well as its applications to related fields The authors discuss recent and relevant developments in algebraic geometry commutative algebra computational algebra discrete geometry and homological algebra The book offers a unique resource both for young and more experienced researchers seeking comprehensive overviews and extensive bibliographic references

**Advances in Cryptology - CRYPTO 2025** Yael Tauman Kalai, Seny F. Kamara, 2025-08-16 The 8 volume set LNCS 16000 16008 constitutes the proceedings of the 45th Annual International Cryptology Conference CRYPTO 2025 which took place in Santa Barbara CA USA during August 17 21 2025 The total of 156 full papers presented in the proceedings was carefully reviewed and selected from 643 submissions They focus on cryptographic topics such as foundational theory and mathematics the design proposal and analysis of cryptographic primitives and protocols secure implementation and optimization in hardware or software applied aspects of cryptography

*Statistical and Fuzzy Approaches to Data Processing, with Applications to Econometrics and Other Areas* Vladik Kreinovich, 2020-06-19 Mainly focusing on processing uncertainty this book presents state of the art techniques and demonstrates their use in applications to econometrics and other areas Processing uncertainty is essential considering that computers which help us understand real life processes and make better decisions based on that understanding get their information from measurements or from expert estimates neither of which is ever 100% accurate Measurement uncertainty is usually described using probabilistic techniques while uncertainty in expert estimates is often described using fuzzy techniques Therefore it is important to master both techniques for processing data This book is highly recommended for researchers and students interested in the latest results and challenges in uncertainty as well as practitioners who want to learn how to use the corresponding state of the art techniques

**Perspectives in Analysis** Michael Benedicks, Peter Jones, Stanislav Smirnov, 2006-06-01 The Conference Perspectives in Analysis was held during May 26 28 2003 at the Royal Institute of Technology in Stockholm Sweden The purpose of the conference was to consider the future of analysis along with its relations to other areas of mathematics and physics and to celebrate the seventy fth birthday of Lennart Carleson The scientific theme was one with which the name of Lennart Carleson has been associated for over fty years His modus operandi has long been to carry out a twofold approach to the selection of research problems First one should look for promising new areas of analysis especially those having close contact with

physically oriented problems of geometric character The second step is to select a core set of problems that require new techniques for their resolutions After making a central contribution Lennart would usually move on to a new area though he might return to the topic of his previous work if new techniques were developed that could break old mathematical log jams Lennart's operating approach is based on fundamental realities of modern mathematics as well as his own inner convictions Here we first refer to an empirical fact of mathematical research All topics have a finite half life with fifteen years being an upper bound for most areas After that time it is usually a good idea to move on to something new
