 - d. Seeds that are produced by self-pollination inherit their characteristics from two different plants.
3. What does it mean when pea plants are described as being true-breeding? If the plants are allowed to self-pollinate, they would produce offspring identical to themselves.
4. To perform his experiments, how did Mendel prevent pea flowers from self-pollinating and control their cross-pollination? He cut away the male parts of a flower and dusted that flower with pollen from a second flower.
