

Witry & Hoek - a network library

Introduction

Witry & Hoek is a network library for Node.js. It provides a simple and easy-to-use API for creating and managing network connections. The library is designed to be flexible and extensible, allowing developers to integrate it into their applications in a variety of ways.

Key Features

- Simple API:** The library provides a simple and intuitive API for creating and managing network connections.
- Flexibility:** The library is designed to be flexible and extensible, allowing developers to integrate it into their applications in a variety of ways.
- Performance:** The library is optimized for performance, ensuring that network connections are established and managed efficiently.
- Security:** The library includes built-in security features to protect network connections from attacks.

Getting Started

To get started with Witry & Hoek, you first need to install the library. This can be done using the following command:

```
npm install witry-hoek
```

Once installed, you can create a new network connection using the `connect` method. For example:

```
const connection = witryHoek.connect('localhost', 8080);
```

The `connect` method returns a `Connection` object, which you can use to interact with the network. For example, you can send data to the connection using the `send` method:

```
connection.send('Hello, world!');
```

You can also receive data from the connection using the `on` method. For example:

```
connection.on('data', (data) => {
  console.log(data);
});
```

For more information on the Witry & Hoek API, please refer to the documentation.

Usage

The following code snippet demonstrates how to use the Witry & Hoek library to create a network connection and send data:

```
const witryHoek = require('witry-hoek');

// Create a new network connection
const connection = witryHoek.connect('localhost', 8080);

// Send data to the connection
connection.send('Hello, world!');
```

The `connect` method takes two arguments: the host name and the port number. In this example, the host is `localhost` and the port is `8080`.

The `send` method takes a single argument: the data to be sent. In this example, the data is the string `'Hello, world!'`.

Advanced Usage

The Witry & Hoek library also provides several advanced features for managing network connections. These include:

- Timeouts:** You can set a timeout for a network connection using the `setTimeout` method.
- Retries:** You can configure the library to automatically retry a failed network connection.
- Logging:** The library includes a logging system to track network activity.

For more information on these advanced features, please refer to the documentation.
