

1.1 Relations and Functions

Learning Goal:

I can recognize functions in various representations.

Relation	
Function	A relation in which each value of the independent variable (the x coordinate) corresponds to exactly one value of the dependent variable (the y coordinate). <i>For every x-value there only exists</i>
Domain	The set of all values of the <u>independent</u> variable of a relation.
Range	The set of all values of the <u>dependent</u> variable of a relation.
Vertical Line Test	Used to determine graphically if a relation is a function or not. If any vertical line intersects the graph of a relation more than once it is not a function.

A relation and a function can be described or shown as:

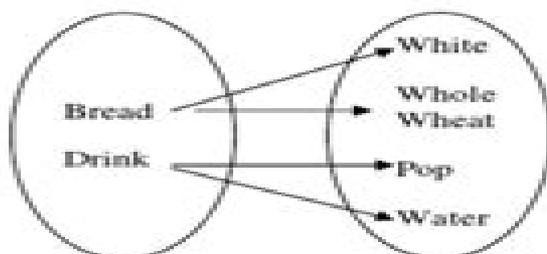

- | | |
|---------------------------|------------------------------|
| a) a set of ordered pairs | b) a table of values |
| c) description in words | d) a mapping (arrow diagram) |
| e) an equation | f) a graph or a scatter plot |

Note: All functions are relations, but not all relations are functions!
