Practical Theology and the Interpretation of Crossing Boundaries Bert Roebben, 2003 In October 2002 the Tilburg Professor of Practical Theology Tjeu van Knippenberg retired In order to honour him as a bright scholar in the field of fundamental practical theology and pastoral care 23 of his colleagues at Tilburg University and elsewhere Nijmegen and Leuven contributed to this festschrift Their attention is focused on the concept of boundaries in practical theology between context and Christian tradition church and society personal identity and Christian narrative individual and community Different research projects out of the Tilburg tradition of practical theology are presented from an empirical hermeneutical perspective

*Research Handbook on Intellectual Property and the Life Sciences* Duncan Matthews, Herbert Zech, 2017-06-30 Intellectual property IP is a key component of the life sciences one of the most dynamic and innovative fields of technology today At the same time the relationship between IP and the life sciences raises new public policy dilemmas The Research Handbook on Intellectual Property and the Life Sciences comprises contributions by leading experts from academia and industry to provide in depth analyses of key topics including pharmaceuticals diagnostics and genes plant innovations stem cells the role of competition law and access to medicines The Research Handbook focuses on the relationship between IP and the life sciences in Europe and the United States complemented by country specific case studies on Australia Brazil China India Japan Kenya South Africa and Thailand to provide a truly international perspective

**Proteins Crossing Membranes** Stephen Rothman, 2019-01-17 In an intriguing series of experiments carried out many years ago a common scientific belief feted by no less than three Nobel prizes was brought into question The observations were about proteins the molecules that the genetic code specifies and that are in one way or another central to all of life s activities The experiments however were not about what proteins do but how they are moved in particular how they are moved from where they are made to where they act The results of these studies conflicted with the standard view of how this happens and thus became controversial The standard view the vesicle theory of protein secretion envisions proteins being

carried within and out of cells en masse in membrane bound sacs or vesicles The controversial experiments demonstrated that to the contrary individual protein molecules cross the relevant membranes as a result of their own motion This was thought to be impossible at the time Proteins Crossing Membranes is a personal narrative that tells the story of the controversy Among other things the author illustrates that scientists like the rest of us can rigidly hold onto their beliefs despite evidence that they are misguided Key Features Reviews the data in support and critical of the vesicle theory of protein secretion Explores the ways scientists respond to evidence that challenges a favored theory Documents the author's personal experiences in this conflict laden situation

**Science Cultivating Practice** Harro Maat,2001-12-31 Science Cultivating Practice is an institutional history of agricultural science in the Netherlands and its overseas territories The focus of this study is the variety of views about a proper relationship between science and agricultural practice Such views and plans materialised in the overall organisation of research and education Moreover the book provides case studies of genetics and plant breeding in the Netherlands colonial rice breeding and agricultural statistics Ideas affected the organisation as much as the other way round The net result was an institutional development in which the values of academic science were rated higher than the values of practice This book is a distinctive piece of work as it treats the dynamics of science in a European as well as in a colonial context These different ecological and social environments lead to other forms of knowledge and experimentation as well as other ways of organising science

**Crossing the threshold** Andreas C. Göransson,2021-02-18 The theory of evolution is considered the unifying theory of biology An accurate understanding of evolution is vital both for the understanding of diverse topics in biology but also for societal issues such as antibiotic resistance or biodiversity In contrast decades of research in science education have revealed that students have difficulties to accurately understand evolutionary processes such as mutation and natural selection The majority of this research relies on a conceptual framework of so called key concepts variation selection inheritance derived from scholarly descriptions of natural selection Recent research suggests that non domain specific concepts such as randomness probability spatial and temporal scales so called threshold concepts are important for evolution understanding in addition to the key concepts Thus many important elements of evolutionary theory are counter intuitive or lie outside direct perception Hence representations such as visualizations models and simulations are considered to be important for teaching and learning evolution While the importance of visualizations is generally acknowledged for science education less is known about how visual design can facilitate students understanding of threshold concepts such as random mutations or spatial scales This thesis uses the Model of Educational Reconstruction MER as the guiding framework for exploring the significance of threshold concepts by analysing the conceptual content of students explanations and extant visualizations of natural selection MER combines scientific content with teaching and learning perspectives for the analysis and design of learning environments Content analysis of visualizations available online showed that most fail to fully represent the basic principles of natural selection

variation selection and inheritance Moreover the representational potential of visualizations was seldom used to represent threshold concepts such as randomness in origin of variation Visualizations were also biased to animals as the context of evolution Similarly upper secondary and tertiary students explanations of natural selection were seldom complete in terms of the basic principles and threshold concepts such as randomness were often lacking Especially significant was the almost complete lack of randomness in upper secondary students explanations In addition threshold concepts were context sensitive across the items used bacteria cheetah and salamander for example spatial scale and randomness was significantly more common in responses to the bacteria item compared to the cheetah and salamander items Considering the results from these studies three interactive visualizations were developed evolution of antibiotic resistance and fur colouration in mice The visualization design was conducted iteratively following a Design Based Research approach and evaluated in classroom settings in secondary and upper secondary Swedish schools The results showed that visualizations targeting randomness and genetic level events such as mutations can guide students towards a more scientific conception of natural selection However there were differences across the visualizations and student samples In addition while students often inferred randomness from the visuals the results showed that integration of randomness into explanations of natural selection may be challenging Hence future research should explore the role of guidance and reflection for students understanding of randomness The thesis also discusses the role of students intuitive conceptions in relation to the use of interactive visualizations and how these preconceptions interact with the presented message By using the theory of frame semantics framing effects and conceptual integration students issues of achieving an accurate understanding of evolution are discussed in relation to the theory of conceptual change Implications for teaching and learning natural selection as well as visualization design for learning are also discussed

Evolutionsteorin förstås ofta från biologers perspektiv Vikten av en korrekt och användbar evolutionsteori har dock inte minst för eleverna inom biologin olika delar av den men också för att fatta beslut i samband med exempelvis antibiotikaresistens Många av de centrala delarna av evolutionsteorin är kontraintuitiva eller abstrakta och decennier av forskning har visat att elever har svårigheter att förstå evolutionens processer som mutation och naturligt urval Representationer som visualiseringar modeller och simuleringar är därför viktiga för att ge elever direkta erfarenheter av evolutionens processer även om vikten av visualiseringar är allmänt accepterad inom naturvetenskapsundervisningen är det mindre känt hur visualiseringars utformning specifikt bidrar till att utveckla elevernas förståelse av vetenskapliga fenomen som evolution Dessutom har forskningen på elevernas förståelse till stor del fokuserat på så kallade nyckelbegrepp variation selektion och arv som huvudsakliga vetenskapliga beskrivningar av evolutionsteorin Dessa begrepp antas vara grundläggande men också tillräckliga för elevernas förståelse Dock har vikten av icke-domenspecifika begrepp kopplade till evolutionsteorin som slump sannolikhet spatial och temporala skalor så kallade tidsbegrepp inte undersökts i någon hög grad Den här avhandlingen använder sig av Model of Educational Reconstruction för att utforska betydelsen

av tr skelbegrepp f r evolutionsf rst else Med utg ngspunkt i den vetenskapliga beskrivningen och historiken unders ks f rekomsten av tr skelbegrepp i befintliga visualiseringar f r l rande samt elevers f rklaringar f r att formulera designprinciper f r interaktiva visualiseringar av evolution Dessutom beskrivs utvecklingen av ett antal interaktiva visualiseringar samt unders kningar av deras potentiella anv ndning i klassrumsmilj er Avhandlingen diskuterar ven betydelsen av elevers intuitiva f rest llingar i relation till anv ndandet av interaktiva visualiseringar och hur dessa f rest llingar interagerar med det presenterade budskapet Genom anv ndning av ramsemantisk teori inklusive framingeffekter och blendteori diskuteras elevens sv righeter och utveckling av en vetenskaplig evolutionsf rst else i relation till tidigare teorier om begrepps f r ndring Konsekvenser av ramsemantisk teori och framingeffekter i visuella medier diskuteras ven i relation till visuell design f r l rande
