school new teaching and learning strategies and the prejudice against girls in physics classes are all issues that have to be addressed Educational research provides a way to build schemas and resources to promote changes in physics education This volume presents physics teaching and learning research connected with the main educational scenarios

The Runes of Evolution Simon Conway Morris,2015-06-30 How did human beings acquire imaginations that can conjure up untrue possibilities How did the Universe become self aware In *The Runes of Evolution* Simon Conway Morris revitalizes the study of evolution from the perspective of convergence providing us with compelling new evidence to support the mounting scientific view that the history of life is far more predictable than once thought A leading evolutionary biologist at the University of Cambridge Conway Morris came into international prominence for his work on the Cambrian explosion especially fossils of the Burgess Shale and evolutionary convergence which is the process whereby organisms not closely related not monophyletic independently evolve similar traits as a result of having to adapt to similar environments or ecological niches In *The Runes of Evolution* he illustrates how the ubiquity of convergence hints at an underlying framework whereby many outcomes not least brains and intelligence are virtually guaranteed on any Earth like planet Conway Morris also emphasizes how much of the complexity of advanced biological systems is inherent in microbial forms By casting a wider net *The Runes of Evolution* explores many neglected evolutionary questions Some are remarkably general Why for example are convergences such as parasitism carnivory and nitrogen fixation in plants concentrated in particular taxonomic hot spots Why do certain groups have a particular propensity to evolve toward particular states Some questions lead to unexpected evolutionary insights If bees sleep as they do do they dream Why is that insect copulating with an orchid Why have sponges evolved a system of fiber optics What do mantis shrimps and submarines have in common If dinosaurs had not gone extinct what would have happened next Will a saber toothed cat ever re evolve Cona Morris observes Even amongst the mammals let alone the entire tree of life humans represent one minute twig of a vast and largely fossilized arborescence Every living species is a linear descendant of an immense string of now vanished ancestors but evolution itself is the very reverse of linear Rather it is endlessly exploratory probing the vast spaces of biological hyperspace Indeed this book is a celebration of how our world is and was populated by a riot of forms a coruscating tapestry of life *The Runes of Evolution* is the most definitive synthesis of evolutionary convergence to be published to date

Absence in Science, Security and Policy Brian Balmer,Brian Rappert,2016-02-06 This book explores the absent and missing in debates about science and security Through varied case studies including biological and chemical weapons control science journalism nanotechnology research and neuroethics the contributors explore how matters become absent ignored or forgotten and the implications for ethics policy and society The chapter *Sensing Absence How to See What Isn't There in the Study of Science and Security* is open access under a CC BY 4.0 license via link.springer.com

The Value of Everything Mariana Mazzucato,2018-09-11 A stimulating analysis of the underlying causes of inequality and growth which forces us to confront long held beliefs about how economies

work and who benefits Martin Wolf Financial Times A scathing indictment of our current global financial system The Value of Everything rigorously scrutinizes the way in which economic value has been accounted and reveals how economic theory has failed to clearly delineate the difference between value creation and value extraction Mariana Mazzucato argues that the increasingly blurry distinction between the two categories has allowed certain actors in the economy to portray themselves as value creators while in reality they are just moving around existing value or even worse destroying it The book uses case studies from Silicon Valley to the financial sector to big pharma to show how the foggy notions of value create confusion between rents and profits reward extractors and creators and distort the measurements of growth and GDP In the process innovation suffers and inequality rises The lesson here is urgent and sobering to rescue our economy from the next inevitable crisis and to foster long term economic growth we will need to rethink capitalism rethink the role of public policy and the importance of the public sector and redefine how we measure value in our society
