Using Multimodal Representations to Support Learning in the Science Classroom Brian Hand, Mark McDermott, Vaughan Prain, 2015-11-06 This book provides an international perspective of current work aimed at both clarifying the theoretical foundations for the use of multimodal representations as a part of effective science education pedagogy and the pragmatic application of research findings to actual classroom settings. Intended for a wide ranging audience from science education faculty members and researchers to classroom teachers, school administrators and curriculum developers, the studies reported in this book can inform best practices in K-12 classrooms of all science disciplines and provide models of how to improve science literacy for all students. Specific descriptions of classroom activities aimed at helping infuse the use of multimodal representations in classrooms are combined with discussion of the impact on student learning. Overarching findings from a synthesis of the various studies are presented to help assert appropriate pedagogical and instructional implications as well as to suggest further avenues of research.

Beautiful Questions in the Classroom Warren Berger, Elise Foster, 2020-04-02 What does it mean to learn? Most of us eventually realize that genuine learning is less about delivering the right answers and more about asking the right questions. In an age of automation, questioning is a uniquely human skill, one we should foster in school and in life. This book is an essential read for educators at every level. Daniel H. Pink, author of *WHEN DRIVE* and *A Whole New Mind*. For teachers around the world, there is a moral urgency to work with young learners in innovative ways that nurture agency, curiosity, agile thinking, and problem solving. The role of questions in this cannot be underestimated. Kath Murdoch, Consultant in Education and Author of *The Power of Inquiry*. Why does engagement plummet as learners advance in school? Why does the stream of questions from curious toddlers slow to a trickle as they become teenagers? Most importantly, what can teachers and schools do to reverse this trend? *Beautiful Questions in the Classroom* has the answers. This inspirational book from Warren Berger and Elise Foster

Cohen,2018-08-15 Recent academic research criticizes the effectiveness of traditional lecturing methods and instead shows the pedagogical effectiveness of active learning methods especially discussion based education Drawing on the dialogic writings of Bakhtin Freire and Habermas this study reviews the five primary themes cited in active learning research improvements in student concentration socialization in disciplinary norms scaffolding towards higher critical thinking inclusion of non traditional learning styles and reduction of student absenteeism Testing these findings in a discussion based undergraduate college education classroom this study finds significant improvements towards higher critical thinking skills increased student concentration and reduced student absenteeism However the study finds questionable effectiveness of discussion based teaching for socializing undergraduate college education students in disciplinary norms
