applications     Explanation and Integration in Mind and Brain Science David M. Kaplan,2017-12-01 This collection brings together a set of new papers that advance the debate concerning the nature of explanation in mind and brain science and help to clarify the prospects for bonafide integration across these fields Long a topic of debate among philosophers and scientists alike there is growing appreciation that understanding the complex relationship between the psychological sciences and the neurosciences especially how their respective explanatory frameworks interrelate is of fundamental importance for achieving progress across these scientific domains Traditional philosophical discussions tend to construe the relationship between them in stark terms either they are related in terms of complete independence i e autonomy or complete dependence i e reduction leaving little room for more interesting relations such as that of mutually beneficial interaction or integration A unifying thread across the diverse set of contributions to this volume is the rejection of the assumption that no stable middle ground exists between these two extremes and common embrace of the idea that these sciences are partially dependent on or constrained by one another By addressing whether the explanatory patterns employed across these domains are similar or different in kind and to what extent they inform and constrain each another this volume helps to deepen our understanding of the prospects for successfully integrating mind and brain science     STEM Road Map 2.0 Carla C.
