Life Science Pnov 2013 Grade 1caps:

America the Fair Dan Meegan,2019-04-15 What makes a person liberal or conservative Why does the Democratic Party scare off so many possible supporters When does our injustice trigger get pulled and how can fairness overcome our human need to look for a zero sum outcome to our political battles Tapping into a pop culture zeitgeist linking Bugs Bunny Taylor Swift and John Belushi through popular science and the human brain to our political predilections arguments and distrusts Daniel Meegan suggests that fairness and equality are key elements missing in today s society Having crossed the border to take up residency in Canada Meegan an American citizen has seen first hand how people enjoy as rights what Americans view as privileges Fascinated with this tension he suggests in *America the Fair* that American liberals are just missing the point If progressives want to win the vote they need to change strategy completely and champion government benefits for everyone not just those of lower income If everyone has access to inexpensive quality health care open and extensive parental leave and free postsecondary education then everyone will be happier and society will be fair The Left will also overcome an argument of the Right that successfully though incongruously appeals to the middle and upper middle classes that policies that help the economically disadvantaged are inherently bad for others Making society fair and equal Meegan argues would strengthen the moral and political position of the Democratic Party and place it in a position to revive American civic life Fairness he writes should be selfishly enjoyed by everyone

The Credibility Crisis in Science Thomas Plümper,Eric Neumayer,2026-03-17 A novel perspective on scientific fraud how undisclosed tweaks to research designs and model specifications fuel the credibility crisis in science In *The Credibility Crisis in Science* leading social scientists Thomas Plümper and Eric Neumayer argue that the most impactful fraud is crucially under recognized While data fabrication and manipulation are widely recognized as fraudulent tweaks the intentional selection of research designs and model specifications based on the results they give are not As a consequence the credibility crisis in science is even more severe than both scientists and the public believe The authors show how easily observational data analyses experimental designs and causal models are tweaked in ways that are extremely difficult often impossible to detect They also argue that conventional strategies to deter prevent and detect fraud will not work for tweaks They put forth two potential solutions first a classification system that categorizes data based on its susceptibility to manipulation and the probability of such manipulation being identified and second the proposal that journal editors and reviewers rather than authors select robustness tests
