

## Producing a data-driven physical climate risk assessment

Identifying which risks are most material to you is a crucial first step

- Companies are increasingly having to comply with climate risk regulations in line with the recommendations of the TCFD
- Granular, forward-looking risk data is key to identifying a company's exposure to physical climate risks
- Data-driven scenario analysis is a vital tool for companies looking to embed climate-related issues into enterprise risk management

Mandatory reporting in line with the recommendations of the Task Force for Climate-related Financial Disclosures (TCFD) has sprung up across the globe as governments follow investors in demanding companies set out how they plan to identify and manage climate risks. The UK, EU, Japan, Singapore, and Canada already have requirements in place, while the SEC in the United States is mobilising to bring in similar regulations. Other reporting standards and frameworks, such as ISSB, the EU's ESRS, GPP and the GRI are also coalescing around the TCFD recommendations.

This is clearly no flash in the pan. Understandably, far-sighted companies are looking to prepare for mandatory reporting, but also recognise that embedding climate change into enterprise risk management can be as much about spotting opportunities as avoiding threats.

However, getting to grips with the finer details of TCFD remains a significant challenge for some companies – with lack of knowledge and data gaps particular pain points. In this guide we'll go through how to address both of those issues using our new Climate Risk Dataset to identify and analyse physical climate risks and conduct scenario analysis.

### Identifying your risks

No two companies' operational footprints or supply chains are alike: the materiality of physical climate risks depends on an organisation's operations and the markets it is exposed to. Physical risks range from short-lived 'acute' risks, such as increasingly severe heatwaves, to more gradual and inherently longer-term 'chronic' risks, like sea level rise.

How these risks impact a business will also vary. Acute and chronic risks can affect organisations directly – like a heatwave impacting crop production – or indirectly, such as successive disasters weakening a country's economy and eroding market opportunities.

Identifying which risks are most material to you is a crucial first step. Our Climate Risk Dataset covers 32 hazards and issues globally, ranging from physical climate risks, including heat, precipitation, drought and sea level rise, to socio-economic vulnerabilities and adaptive capacity.
