environmental issues and lays the groundwork for a new paradigm bringing a greater understanding of what is needed to  
help create an environmentally and economically sustainable future which to date has been an uphill battle and not an  
obvious choice The book presents the case for a paradigm based on a multi model of life as organism life as ecosystem and  
life as biosphere as opposed to the singular assumption that life can be viewed solely as an organism All backed with well  
cited research from top investigators from around the world this book is a must have resource for anyone working in ecology

environmental science or sustainability Introduces a holistic systemic approach and a synthesis of the systemic root cause that underlies many surface symptoms that are part of individual environmental problems climate water energy etc  
Complements current piecemeal approaches in order to solve many interconnected environmental problems which share root causes Provides tests and thought experiments to challenge current views on sustainability leveraging the power of critical thinking to find new solutions Gives insights on how to find solutions by blending interdisciplinary and transdisciplinary focuses with disciplinary specialization in ecology and ecosystem science Bridges concepts and methods from math to ecology to human development
