Educating Children with Velo-Cardio-Facial Syndrome, 22q11.2 Deletion Syndrome, and DiGeorge Syndrome, Third Edition Donna Cutler-Landsman, 2020-01-01 The 22q11.2 deletion syndrome also known as velo cardio facial syndrome and DiGeorge syndrome is relatively new The genetic test to determine if a child has it has only been available since 1994 *Educating Children with Velo Cardio Facial Syndrome 22q11.2 Deletion Syndrome and DiGeorge Syndrome Third Edition* effectively blends the thoughtful research that has transpired within the past 25 years with practical and current educational strategies to better meet the needs of children with the 22q11.2 deletion syndrome and other developmental disabilities With its expanded content as well as new contributions from some of the most highly regarded experts in the field *Educating Children with Velo Cardio Facial Syndrome 22q11.2 Deletion Syndrome and DiGeorge Syndrome Third Edition* is an essential resource for teachers parents physicians and therapists of children with this complicated learning profile To first address the scientific information that is needed to understand the syndrome and the implications of current research expert contributors present the results of current studies involving brain abnormalities language learning profiles medical needs and psychiatric and behavioral difficulties These valuable chapters are written in a reader friendly manner to help parents professionals and teachers gain useful and necessary comprehension of the unique characteristics of the 22q11.2 DS population The second part of the book is a practical guide to educating a child with 22q11.2 DS from birth through adulthood Divided into the various stages of development from preschool to adulthood it includes information regarding the necessary tests special education teams should run typical difficulties associated with learning changes that occur with ability as the child matures and behavioral problems in the school setting New to the Third Edition Addition of recent research studies since 2012 Current research and treatment options for mental health issues Expanded and enhanced coverage of bullying and the social emotional aspects of the syndrome Discussion on the possibility of cognitive decline and how to address this at school More information on Common Core State Standards and standardized testing for children with disabilities including a section on understanding test scores Homeschooling and other placement alternatives Executive functioning deficits their impact in the classroom and approaches to use Dealing with problem behaviors such as withdrawal and school refusal Cognitive remediation and new treatment strategies New math and reading remediation techniques New options for programming and post secondary placements *Improving Working Memory in Learning and Intellectual Disabilities* Silvia Lanfranchi, Barbara Carretti, 2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning

cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes
