How does an enzyme influence chemical reactions?
 What roles do enzymes play in living things?

INTRODUCTORY SITUATION QUESTIONS:

Figure 1

1. If you're going hiking this weekend and you have the option of hiking a mountain that is 1400 meters in height and a mountain that is 650 meters in height, BUT you know that you have limited time because of other plans – which mountain would you choose to hike, A or B?
2. If you are hiking at the same pace, which of these mountains would require MORE energy to hike up (A or B)?

INFORMATION SECTION 1: ACTIVATION ENERGY

Figure 2

The picture above shows someone trying to push a boulder up a hill. In order for the boulder to reach its final destination at point B, it must be pushed to the top of the hill because once it reaches the top of the hill it will roll down the rest of the way. A similar scenario exists in chemistry, before a chemical reaction will take place, energy must be put into the system. The energy needed for a chemical reaction to move from point A to the top of the hill is known as activation energy, also written as E_a .
