

8 Chapter 1

thus, the first number of the required list of 5 numbers is k , the second is $k + 74$, the third is $k + 148$, and so forth.

- (b) Following part (a) with $k = 10$, the first number of the sample is 10, the second is $10 + 74 = 84$. The remaining three numbers in the sample would be 158, 232, and 306. Thus, the sample of 5 would be 10, 84, 158, 232, and 306.
- 1.60** (a) Answers will vary, but here is the procedure: (1) Divide the population size, 500, by the sample size, 9, and round down to the nearest whole number if necessary; this gives 55. Use a table of random numbers (or a similar device) to select a number between 1 and 55, call it k . (3) List every 55th number, starting with k , until 9 numbers are obtained; thus, the first number of the required list of 9 numbers is k , the second is $k + 55$, the third is $k + 110$, and so forth.
- (b) Following part (a) with $k = 48$, the first number of the sample is 48, the second is $48 + 55 = 103$. The remaining seven numbers in the sample would be 158, 213, 268, 323, 378, 433, and 488. Thus, the sample of 9 would be 48, 103, 158, 213, 268, 323, 378, 433, and 488.
- 1.61** (a) Answers will vary, but here is the procedure: (1) The population of size 50 is already divided into five clusters of size 10. (2) Since the required sample size is 20, we will need to take a SRS of 2 clusters. Use a table of random numbers (or a similar device) to select two numbers between 1 and 5. These are the two clusters that are selected. (3) Use all the members of each cluster selected in part (2) as the sample.
- (b) Following part (a) with clusters #1 and #3 selected, we would select all the members in cluster 1, which are 1 - 10, and all the members in cluster 3, which are 21 - 30.
- 1.62** (a) Answers will vary, but here is the procedure: (1) The population of size 100 is already divided into ten clusters of size 10. (2) Since the required sample size is 30, we will need to take a SRS of 3 clusters. Use a table of random numbers (or a similar device) to select three numbers between 1 and 10. These are the three clusters that are selected. (3) Use all the members of each cluster selected in part (2) as the sample.
- (b) Following part (a) with clusters #2, #6, and #9 selected, we would select all the members in cluster 2 (11-20), all the members in cluster 6 (51-60), and all the members in cluster 9 (81-90). Therefore, our sample would consist of 11-20, 51-60, and 81-90.
- 1.63** (a) From each strata, we need to obtain a SRS of a size proportional to the size of the stratum. Therefore, since strata #1 is 30% of the population, a SRS equal to 30% of 20, or 6, should be sampled from strata #1. Since strata #2 is 20% of the population, a SRS equal to 20% of 20, or 4, should be sampled from strata #2. Similarly, a SRS of size 8 should be sampled from strata #3 and a SRS of size 2 should be sampled from strata #4. The sample sizes from stratum #1 through #4 are 6, 4, 8, and 2 respectively.
- (b) Answers will vary following the procedure in part (a).
- 1.64** (a) From each strata, we need to obtain a SRS of a size proportional to the size of the stratum. Therefore, since strata #1 is 40% of the population, a SRS equal to 40% of 10, or 4, should be sampled from strata #1. Since strata #2 is 30% of the population, a SRS equal to 30% of 10, or 3, should be sampled from strata #2. Similarly, a SRS of size 3 should be sampled from strata #3. The sample sizes from stratum #1 through #3 are 4, 3, and 3 respectively.
- (b) Answers will vary following the procedure in part (a).
