

Classic Model for an Argument

No one structure fits all written arguments. However, most college courses require arguments that consist of the following elements. Below is a basic outline for an argumentative or persuasive essay. This is only one possible outline or organization. Always refer to your handbook for specifics.

I. Introductory Paragraph

- Your introductory paragraph sets the stage or the context for the position you are arguing for.
- This introduction should end with a thesis statement that provides your claim (what you are arguing for) and the reasons for your position on an issue.

A. *Your Thesis:*

- states what your position on an issue is
- usually appears at the end of the introduction in a short essay
- should be clearly stated and often contains emphatic language (should, ought, must)

B. *Sample Argumentative Thesis*

- The production, sale, and possession of assault weapons for private citizens should be banned in the U.S.

II. Body of your Argument

A. *Background Information*

- This section of your paper gives the reader the basic information he or she needs to understand your position. This could be part of the introduction, but may work as its own section.

B. *Reasons or Evidence to Support your Claim*

- All evidence you present in this section should support your position. This is the heart of your essay. Generally, you begin with a general statement that you back up with specific details or examples. Depending on how long your argument is, you will need to devote one to two well-developed paragraphs to each reason/claim or type of evidence.
- Types of evidence include:
 - first-hand examples and experiential knowledge on your topic (specific examples help your readers connect to your topic in a way they cannot with abstract ideas)
 - Opinions from recognized authorities
 - The tipsheet on the three logical appeals covers the types of evidence you can use in argumentation.

pyomo is an open source software package for formulating and solving large scale optimization problems the software extends the modeling approach supported by modern aml algebraic modeling language tools pyomo is a flexible extensible and portable aml that is embedded in python a full featured scripting language

[pyomo optimization modeling in python springer](#) - Oct 21 2022

this book describes a tool for mathematical modeling the python optimization modeling objects pyomo software pyomo supports the formulation and analysis of mathematical models for complex optimization applications this capability is commonly associated with algebraic modeling languages amls which support

about pyomo - Jul 18 2022

pyomo is a python based open source software package that supports a diverse set of optimization capabilities for formulating solving and analyzing optimization models a core capability of pyomo is modeling structured optimization applications
