Mechanisms and Control of Cell Division Thomas L. Rost, Ernest M. Gifford, 1977-06-01 *Cell Cycle and Cell*

Differentiation J. Reinert, H. Holtzer, 2013-06-29 It is instructive to compare the response of biologists to the two themes that comprise the title of this volume The concept of the cell cycle in contrast to cell division is a relatively recent one Nevertheless biologists of all persuasions appreciate and readily agree on the central problems in this area Issues ranging from mechanisms that initiate and integrate the synthesis of chromosomal proteins and DNA during S phase of mitosis to the manner in which assembly of microtubules and their interactions lead to the segregation of metaphase chromosomes are readily followed by botanists and zoologists as well as by cell and molecular biologists These problems are crisp and well defined The current state of cell differentiation stands in sharp contrast This one of the oldest problems in experimental biology almost defies definition today The difficulties arise not only from a lack of pertinent information on the regulatory mechanisms but also from conflicting basic concepts in this field One of the ways in which this situation might be improved would be to find a broader experimental basis including a better understanding of the relationship between the cell cycle and cell differentiation

Cell Cycle Checkpoints Willis X. Li, 2011-08-31 Cell cycle checkpoints control the fidelity and orderly progression of eukaryotic cell division By controlling the orderly progression of critical cell cycle events such as DNA replication and chromosome segregation and ensuring proper repair of damaged DNA cell cycle checkpoints function to ensure genome integrity Mechanisms of checkpoint controls are not only the research focus of investigators interested in mechanisms that regulate the cell cycle but are also the interests of researchers studying cancer development as it is increasingly clear that loss of cell cycle checkpoints which leads to genomic instability as a result is a hallmark of tumorigenesis *Cell Cycle Checkpoints Methods and Protocols* provides detailed descriptions of methodologies currently employed by researchers in the field including those commonly used in the mammalian yeast *C. elegans* *Drosophila* and *Xenopus* model systems Each chapter describes a specific technique or protocol such as a method to induce cell cycle checkpoints in a particular model system to synchronize a population of cells to allow observations of cell cycle progression to identify genes involved in checkpoint regulation and to study particular protein components of cell cycle checkpoint pathways Written in the highly successful *Methods in Molecular Biology*TM series format chapters contain introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and notes on troubleshooting and avoiding known pitfalls Authoritative and easily accessible *Cell Cycle Checkpoints Methods and Protocols* seeks to serve both professionals and novices with its well honed methodologies in an effort to further our knowledge of this essential field

Parthier, 1982-02 Three years have elapsed since the publication of the first edition of this book in German The continued interest of our readers and the rapid progress of our knowledge in many fields necessitates a thoroughly revised and somewhat enlarged new edition Cell differentiation is a prerequisite of life It is defined as the process leading to the qualitatively and quantitatively selective realization of distinct parts of a given genetic material Cell differentiation comprises five main aspects 1 signal reception and transformation 2 selective rearrangements of the genetic material 3 differential gene expression 4 organization of gene expression programs and 5 intercellular coordination of cell differentiation within the developmental programs of multicellular organisms Despite the bewildering multiplicity of its results i e the differentiated phenotypes of cells there are apparently fundamental similarities with respect to the molecular mechanisms of the process itself These mechanisms constitute the central subject of this book
