Excel Formulas
The ability to use formulas is one of the most powerful features of Excel. It allows you to perform calculations on data, and the results are automatically updated when the data changes. This is a key feature of spreadsheets, and it's what makes them so useful for business and personal use.

Formulas and Functions
A formula is an equation that you enter into a cell in Excel. It can be as simple as adding two numbers, or as complex as a multi-step calculation. Functions are pre-defined formulas that perform specific tasks, such as adding a range of numbers or finding the average of a set of data.

Using Formulas
To use a formula, you first need to select the cell where you want the result to appear. Then, you enter the formula, starting with an equals sign (=). For example, to add the numbers 5 and 10, you would enter =5+10. Excel will calculate the result and display it in the cell.
