The Mathematics of Games David G. Taylor, 2014-12-01 The Mathematics of Games An Introduction to Probability takes an inquiry based approach to teaching the standard material for an introductory probability course It also discusses different games and ideas that relate to the law of large numbers as well as some more mathematical topics not typically found in similar books Written in an accessible student friendly style the book uses questions about various games not just casino games to motivate the mathematics The author explains the examples in detail and offers ample exercises for students to practice their skills Both mini excursions appearing at the end of each chapter and the appendices delve further into interesting topics including the St Petersburg paradox binomial and normal distributions

Fibonacci numbers and the traveling salesman problem By exploring games of chance this text gives students a greater understanding of probability It helps them develop the intuition necessary to make better more informed decisions in strategic situations involving risk It also prepares them to study the world of statistics *Student Resource Guide for Excursions in Modern Mathematics* Dale R. Buske, Peter Tannenbaum, 2013-02-11 In addition to the worked out solutions to odd numbered exercises from the text this resource guide contains selected hints that support the reader including lists of skills that will help prepare for the chapter exams **Student Resource Guide** Dale R. Buske, Peter Tannenbaum, 2006-08 Student Resource Guide contains full worked out solutions to odd numbered exercises from the text selected hints that point the reader in one of many directions leading to a solution and keys to student success including lists of skills that will help prepare for chapter exams Games, Gambling, and Probability David G. Taylor, 2021-06-22 Many experiments have shown the human brain generally has very serious problems dealing with probability and chance A greater understanding of probability can help develop the intuition necessary to approach risk with the ability to make more informed and better decisions The first four chapters offer the standard content for an introductory probability course albeit presented in a much different way and order The chapters afterward include some discussion of different games different ideas that relate to the law of large numbers and many more mathematical topics not typically seen in such a book The use of games is meant to make the book and course feel like fun Since many of the early games discussed are casino games the study of those games along with an understanding of the material in later chapters should remind you that gambling is a bad idea you should think of placing bets in a casino as paying for entertainment Winning can obviously be a fun reward but should not ever be expected Changes for the Second Edition New chapter on Game Theory New chapter on Sports Mathematics The chapter on Blackjack which was Chapter 4 in the first edition appears later in the book Reorganization has been done to improve the flow of topics and learning New sections on Arkham Horror Uno and Scrabble have been added Even more exercises were added The goal for this textbook is to complement the inquiry based learning movement In my mind concepts and ideas will stick with the reader more when they are motivated in an interesting way Here we use questions about various games not just casino games to motivate the mathematics and I would say that the writing emphasizes a just in time mathematics approach Topics are presented mathematically as questions about the games themselves are posed Table of Contents Preface 1 Mathematics and Probability 2 Roulette and Craps Expected Value 3 Counting Poker Hands 4 More Dice Counting and Combinations and Statistics 5 Game Theory Poker Bluffing and Other Games 6 Probability Stochastic Matrices Board Game Movement 7 Sports Mathematics Probability Meets Athletics 8 Blackjack Previous Methods Revisited 9 A Mix of Other Games 10 Betting Systems Can You Beat the System 11 Potpourri Assorted Adventures in Probability Appendices Tables Answers and Selected Solutions Bibliography Biography Dr David G Taylor is a professor of mathematics and an associate dean for academic affairs at Roanoke College in southwest Virginia He attended Lebanon Valley College for his B S in computer

science and mathematics and went to the University of Virginia for his Ph D While his graduate school focus was on studying infinite dimensional Lie algebras he started studying the mathematics of various games in order to have a more undergraduate friendly research agenda Work done with two Roanoke College students Heather Cook and Jonathan Marino appears in this book Currently he owns over 100 different board games and enjoys using probability in his decision making while playing most of those games In his spare time he enjoys reading cooking coding playing his board games and spending time with his six year old dog Lilly
