

Informatica PowerCenter Transformations: Clear Explanations

Source Qualifier

Type: Passive, Connected

The Source Qualifier transformation represents the rows fetched from a relational or flat file source. It converts source data types to Informatica data types and allows you to filter rows, join multiple sources, and sort data at the relational level, reducing the volume of data passed to the mapping.

Usage Tips:

- • Use SQL override to push complex filters or joins to the database.
- • Avoid unnecessary columns to improve performance.
- • Enable pushdown optimization when possible.

Expression

Type: Active, Connected

The Expression transformation lets you calculate values in a row by using built-in functions and operators. It can be used for data cleansing, concatenation, mathematical calculations, and conditional logic.

Usage Tips:

- • Group all related calculations in a single Expression to reduce stages.
- • Rename ports clearly to reflect their purpose.
- • Watch out for datatype conversions that may affect precision.

Aggregator

Type: Active, Connected

The Aggregator transformation performs aggregate calculations such as SUM, AVG, MIN, MAX, and COUNT. It groups data based on grouping ports and computes aggregate values per group.

Usage Tips:

- • Use sorted input to optimize performance (check "Sorted Input" option).
- • Minimize the number of groups to reduce memory usage.
- • Consider pushdown optimization for large datasets.
